MINSUD RESOURCES CORP.
MANAGEMENT'S DISCUSSION & ANALYSIS

For the Six Months Ended June 30, 2026

INTRODUCTION

The following is a Management's Discussion and Analysis ("MD&A") of the financial condition and results of operations of Minsud Resources Corp. (the "Company" or "Minsud") to enable a reader to assess the financial condition and results of operations of the Company for the six months ended June 30, 2026.

This MD&A has been prepared as at August 31, 2026 unless otherwise indicated.

This MD&A should be read in conjunction with the Company's condensed interim consolidated financial statements for the six months ended June 30, 2026 and 2025 including the related note disclosure (the "Financial Statements"). The Financial Statements are presented on a consolidated basis and include the accounts of the Company and its wholly-owned subsidiary Minsud Argentina Inc. ("MAI"). The Financial Statements are prepared in accordance with IFRS Accounting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB"). All dollar figures included therein and in the following MD&A are expressed in Canadian dollars unless otherwise indicated. References to US$ are to United States dollars.

The Company's head office and principal business address is 340 Richmond Street West, Toronto, Ontario M5V 1X2. The Company is a reporting issuer in the provinces of British Columbia, Alberta and Ontario and trades its common shares on the TSX Venture Exchange (the "Exchange"), under the symbol MSR. Additional information relevant to the Company's activities, including press releases, can be found on the System for Electronic Document Analysis and Retrieval ("SEDAR+") at www.sedarplus.ca or on the Company's website at www.minsud.com.

MANAGEMENT'S RESPONSIBILITIES FOR FINANCIAL REPORTING

The Financial Statements have been prepared by management in accordance with IFRS and have been approved by the Company's board of directors (the "Board"). The integrity and objectivity of the Financial Statements are the responsibility of management. In addition, management is responsible for ensuring that the information contained in the MD&A is consistent where appropriate, with the information contained in the Financial Statements.

The Financial Statements may contain certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis to ensure that the Financial Statements are presented fairly in all material respects.

The Board is responsible for ensuring that management fulfills its responsibilities for financial reporting and internal control. The Board carries out this responsibility principally through its audit committee. The members of the audit committee are appointed by the Board and have sufficient financial expertise to assume this role with the Company. The majority of the audit committee members are independent and not involved in the Company's daily operations.

CAUTIONARY NOTE ON FORWARD-LOOKING INFORMATION

This MD&A contains "forward-looking information" and "forward-looking statements" within the meaning of applicable Canadian securities laws (collectively referred to as "forward-looking information") which relate to future events or the Company's future performance and may include, but are not limited to, statements about strategic plans, spending commitments, future operations, results of exploration, anticipated financial results, future work programs, mineral estimates and deposits, the mineral potential of the Chita Valley Project, capital expenditures and expected working capital requirements. Often, but not always, forward-looking information can be identified by the use of words such as "plans", "expects", "is expected", "budget", "scheduled", "estimates", "continues", "forecasts", "projects", "predicts", "intends", "anticipates" or "believes", or

variations of, or the negatives of, such words and phrases, or state that certain actions, events or results "may", "could", "would", "should", "might" or "will" be taken, occur or be achieved.

Readers are cautioned not to place undue reliance on forward looking information and there can be no assurance that forward looking information will prove to be accurate as the Company's actual results, performance or achievements may differ materially from any future results, performance or achievements expressed or implied by such forward-looking information if known or unknown risks, uncertainties or other factors affect the Company's business, or if the Company's estimates or assumptions prove inaccurate. Therefore, the Company cannot provide any assurance that forward-looking information will materialize. Factors that could cause results or events to differ materially from current expectations expressed or implied by the forward-looking information, include, but are not limited to: inherent risks involved in the exploration and development of mineral properties; the uncertainties involved in interpreting drilling results and other geological data; the possibility of project delays and cost overruns or unanticipated costs and expenses; fluctuations in the currency markets (such as the Canadian Dollar, Argentine Peso and the United States Dollar); changes in national and local government, legislation, taxation, controls, regulations and political or economic developments in Canada and Argentina or other countries in which the Company may carry on business in the future; operating or technical difficulties in connection with exploration and development activities; risks and hazards associated with the business of mineral exploration and development (including environmental hazards or industrial accidents); risks relating to the credit worthiness or financial condition of suppliers and other parties with whom the Company does business; the presence of laws and regulations that may impose restrictions on mining, including those currently enacted in Argentina; employee relations; relationships with and claims by local communities; availability and increasing costs associated with operational inputs and labour; the speculative nature of mineral exploration and development, including the risks of obtaining necessary licenses, permits and approvals from government authorities; business opportunities that may be presented to, or pursued by, the Company; challenges to, or difficulty in maintaining, the Company's title to properties; uncertainties relating to the availability and costs of financing needed in the future; and the factors identified under "Risk Factors" in this MD&A. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those contained in forward-looking information, there may be other factors that could cause actions, events or results to differ from those anticipated, estimated or intended.

The forward looking information contained in this MD&A are based upon assumptions management believes to be reasonable including, without limitation: financing will be available for future exploration, development and operating activities; the actual results of the Company's development and exploration activities will be favourable or at least consistent with management's expectations; operating, development and exploration costs will not exceed management's expectations; all requisite regulatory and governmental approvals for development projects and other operations will be received on a timely basis upon terms acceptable to the Company, and applicable political and economic conditions will be favourable to the Company such as the continuing support for mining by local governments in Argentina; the price of gold and/or other applicable metals and applicable interest and exchange rates will be favourable to the Company or at least consistent with management's expectations; no title disputes will exist with respect to the Company's properties; debt and equity markets and other applicable economic conditions will be favourable to the Company; the availability of equipment and qualified personnel to advance exploration projects and; the execution of the Company's existing plans and further exploration and development programs for its projects, which may change due to changes in the views of the Company or if new information arises which makes it prudent to change such plans or programs.

This forward-looking information represents the Company's views as of the date of this MD&A. The Company anticipates that subsequent events and developments may cause the Company's views to change. The Company does not undertake to update any forward-looking information, either written or oral, that may be made from time to time by, or on behalf of the Company, subsequent to the date of this discussion, other than as required by law.

CORPORATE OVERVIEW

The Company was incorporated under the *Business Corporations Act* (Ontario) on October 11, 2007 under the name "Rattlesnake Ventures Inc." and changed its name to "Minsud Resources Corp." on May 10, 2011 upon the completion of its Qualifying Transaction (as defined under the policies of the Exchange through which it ceased being a capital pool company).

As a result of its Qualifying Transaction, the Company acquired all of the issued and outstanding shares of Minsud Resources Inc. ("MSR") by way of a three-cornered amalgamation resulting in the amalgamation of MSR and 1830835 Ontario Inc., a wholly owned subsidiary of the Company, to form MAI (the "Minsud Transaction"). At the time of the completion of the Minsud Transaction, MAI became the owner of 95% of the issued outstanding shares of Minera Sud Argentina S.A. ("MSA"), an Argentinean company, which was previously held by MSR. As at June 30, 2026 and the date of this MD&A, MAI held 311,017,676 of the 623,281,916 outstanding common shares of MSA, representing an ownership interest of 49.9% (see discussion of the Earn-In Agreement below).

As of the date of this MD&A, the members of the Company's Board of Directors are Alberto Francisco Orcoyen, Carlos Alberto Adamo (non-executive Chairman), Agustin Dranovsky, Lucia Dragonetti, Pablo Taussig, Paul F. Andersen and Ramiro Massa. As of the date of this MD&A, Mr. Orcoyen, Mr. Adamo and Ms. Dragonetti form the Company´s audit committee, and Mr. Taussig, Mr. Adamo and Mr. Dranovsky form the compensation committee.

As of the date of this MD&A, the Board of Directors is made up of a majority of independent directors in accordance with the guidance of Canadian securities laws. The independent directors are Carlos Adamo, Lucia Dragonetti, Pablo Taussig and Alberto Orcoyen.

PRINCIPAL BUSINESS OF THE COMPANY

The Company holds a 49.9% interest in MSA, whose principal focus is the development of the Chita Valley exploration project (the "Chita Valley Project") consisting of three contiguous core properties located in Argentina: the Chita, Brechas Vacas and Minas de Pinto mineral concessions (totaling 8,350 ha), and the five adjacent properties (Chita Este, Brechas Vacas Oeste, Chita Norte, Chita Sur and Fortuna I), totaling approximately 19,923 hectares. As of the date of this MD&A, MSA is the 100% owner of the properties constituting the Chita Valley Project.

A 0.6% net smelter return royalty ("NSR") is payable to the Brechas Vacas property owners, with MSA having the option to purchase a 0.3% NSR at any time for a one-time payment of US$400,000. A 2% NSR on future production revenue from the Chita Norte and Chita Sur exploration permits is payable to Troy Resources Argentina Ltd. MSA has the right to purchase one half or 1% of the NSR royalty by paying US$750,000. A 2% NSR on future production revenue from the Fortuna I exploration permit is payable to Teck Argentina Ltd. MSA has the right to purchase one half or 1% of the NSR royalty by paying US$600,000.

On October 9, 2024, Minsud signed an agreement with Patagonia Gold Plc. to transfer its 5% Net Profit Interest ("NPI) over the Gastrenor Property located in Chubut Province, Argentina in exchange for a 0.25% Net Smelter Return ("NSR") on future production on the entire property block, encompassing both the Mina Angela project and the Gastrenor Block.

On January 15, 2024, Minsud and MSA signed an agreement to transfer its ownership in the La Rosita project (5,986 ha), a gold and silver prospect located within the Deseado Massif in Santa Cruz Province, to an arm's length acquirer. In exchange for the transfer, MAI will receive a 2.5% NSR and the acquirer has the option to acquire 50% of the NSR for US$1,500,000.

On November 1, 2019, the Company signed an earn-in agreement (the "Earn-In Agreement") with South32 to explore the Chita Valley Project. The Earn-in Agreement granted South32 the right to acquire up to a 50.1% direct interest in MSA at the end of the 4-year earn-in period. On April 13, 2023, in accordance with the Earn-In Agreement, South32 exercised its earn-in right to acquire 50.1% of MSA.

On April 5, 2024, South32 was issued a 50.1% interest in MSA in consideration for the South32 initial capital contribution pursuant to the Earn-in Agreement. At the same time, South32 and Minsud entered into a shareholders' agreement to govern the management and operation of MSA which will include further exploration and, if economically feasible, the development and exploitation of the Chita Valley Project. Further, Minsud was not obligated to contribute any amount to an approved program and budget for the Chita Valley Project until the later of (i) the date on which the aggregate of the South32 Initial Capital Contribution and future amounts contributed and funded by South32 in respect of MSA approved programs and budgets equals $42 million and (ii) April 5, 2026.

On June 19, 2026, Minsud exercised, through MAI, its contractual right to a 12-month Suspension Period under the shareholders' agreement. The Suspension Period commenced on May 28, 2026, being the date on which MSA's Board approved the applicable Program and Budget, and will expire on May 27, 2027. During the Suspension Period, South32 is required to fund the contributions otherwise required to be made by both shareholders to MSA, and MAI is not required to fund contributions in respect of its 49.9% interest. The operation of the contractual dilution provisions is suspended from the effective date of the Suspension Notice, in each case subject to the terms of the shareholders' agreement.

For more details relating to the Shareholders' Agreement, please see "Shareholders' Agreement with South32" below.

BUSINESS DEVELOPMENTS DURING THE PERIOD ENDED JUNE 30, 2026

Consequent to receiving the results from in-fill and extension drilling during 2025, the Company reported its updated Mineral Resource estimates over its two deposits (Chinchillones polymetallic Cu-Ag-Zn-Pb-Au deposit and Chita South supergene-enriched Cu-Mo-Au-Ag deposit) at the Chita Valley Project in April 2026. These two deposits are merely 2 kms apart. This milestone marks a highly significant progress in the Chita Valley Project's ongoing development.

On a consolidated and attributable basis, metal contained in the Indicated and Inferred Mineral Resource categories totaled:

- **Indicated Resources:** 1,033 Kt copper equivalent, consisting of 540 kt Cu, 8.0 kt Mo, 73.2 MOz Ag, 754 kOz Au, and 375 kt Zn; and
- **Inferred Resources:** 3,333 kt of copper equivalent, consisting of 2,024 kt Cu, 65.4 kt Mo, 195.8 MOz of Ag, 2,051 kOz of Au, 719 kt of Zn.

Both the Chinchillones Complex and PSU deposits demonstrate reasonable prospects for eventual economic extraction ("RPEEE"), as defined by the Committee for Mineral Reserve International Reporting Standard. This evaluation is based on drilling conducted by MSA between 2020 and 2025, supplemented by earlier drill holes. The estimate is supported by preliminary metallurgical studies and economic parameters, mining costs, processing costs, and metal recoveries from Cu, Mo, and Zn concentrates to derive Net Smelter Return ("NSR").

Comprehensive evaluation of higher-grade zones through detailed evaluation of the geochemical-textural characteristics at the Chinchillones polymetallic deposit has confirmed the presence of coherent high-grade hydrothermal breccias. Previous drilling has been suboptimal because of the limited understanding of the breccia geometry and the controls to mineralization. The review conducted established that the principal high-grade breccias remain open along strike, down-dip and up-dip (to shallower levels) and that several compelling, untested breccia targets exist.

Surface mapping in conjunction with surface geochemistry and synthesis of the results and interpretation of various geological, geophysical and geochemical information base identified three drill-ready target areas hosted in highly prospective mineralized corridors

With favorable topography, abundant water, access to power, excellent infrastructure and friendly climate, the Chita Valley Project has field conditions to be able to explore on a year-round basis. There are no active alpine glaciers, and the tenement area is between 3,100m and 4,100m ASL.

EARN-IN AGREEMENT WITH SOUTH32

On November 1, 2019, the Company, MAI and MSA, entered into an Earn-In Agreement with South32, a wholly owned subsidiary of South32 Limited, in connection with the exploration of the Chita Valley Project.

South32 Limited is a globally diversified mining and minerals company with operations across the Americas, Australia and Southern Africa

The Earn-In Agreement granted South32 the right to acquire up to a 50.1% direct interest in MSA upon satisfaction of the applicable funding requirements.

Under the Earn-in Agreement, South32 was required, in order to satisfy the initial funding requirements of its earn-in right, to provide aggregate capital contributions of C$14 million to MSA over a period of four years, as follows: (i) not less than $3.5 million by December 31, 2020; (ii) not less than an aggregate of $7 million by December 31, 2021; (iii) not less than an aggregate of $10.5 million by December 31, 2022; and (iv) not less than an aggregate of $14 million by December 31, 2023.

South32 satisfied the initial capital contribution requirement within a period of three years and, on April 13, 2023, exercised its earn-in right to acquire a 50.1% interest in MSA.

SHAREHOLDERS' AGREEMENT WITH SOUTH32

On April 5, 2024, South32 acquired a 50.1% interest in MSA through the subscription for MSA shares in consideration for capital contributions previously funded by South32 pursuant to the Earn-In Agreement. As a result, MAI's interest in MSA was reduced to 49.9%. On the same date, MAI, MSA and South32 entered into a shareholders' agreement (the "Shareholders' Agreement") to govern the management and operation of MSA, including further exploration and, if economically feasible and agreed by the shareholders, the development and exploitation of the Chita Valley Project.

Under the terms of the Earn-In Agreement and the Shareholders' Agreement, MAI was not required to contribute any amount to an approved program and budget until the later of (i) the date on which the aggregate of the South32 Initial Capital Contribution and subsequent amounts contributed and funded by South32 in respect of MSA-approved programs and budgets equalled C$42 million and (ii) April 5, 2026.

As at June 30, 2026, South32 had provided aggregate funding of $59.9 million (US$44.2 million) to MSA since the execution of the initial Earn-In Agreement, compared with $58.1 million (US$43.0 million) as at December 31, 2025. Funding provided by South32 prior to the acquisition of its 50.1% interest in MSA formed part of the consideration for such acquisition, while subsequent funding has been provided pursuant to the terms of the Shareholders' Agreement, including South32's Sole Funding Commitment.

Following the expiry of South32's Sole Funding Commitment on April 5, 2026, Minsud and South32 became responsible for funding MSA in proportion to their respective 49.9% and 50.1% interests. Between April 5, 2026 and June 30, 2026, Minsud, through MAI contributed $822,593 (US$600,000) to MSA and South32 contributed $825,890 (US$602,404), representing their respective shares of the approved funding requirements for the period.

On June 19, 2026, Minsud exercised, through MAI, its contractual right to a 12-month Suspension Period under the Shareholders' Agreement. The Suspension Period commenced on May 28, 2026, being the date on which MSA's Board approved the applicable Program and Budget, and will expire on May 27, 2027. During the Suspension Period, South32 is required to fund all contributions required to be made by the shareholders to MSA, and MAI is not required to fund contributions in respect of its 49.9% interest. The operation of the

contractual dilution provisions is suspended from the effective date of the Suspension Notice, in each case subject to the terms of the Shareholders' Agreement.

Upon expiry of the Suspension Period, if MAI has not completed a transfer of its interest, MAI may elect, within the period prescribed by the Shareholders' Agreement, to reimburse South32 an amount equal to 1.5 times the contributions made by South32 on MAI's behalf during the Suspension Period. If MAI does not make such reimbursement, the applicable dilution provisions will again become operative and MAI's percentage interest will be recalculated retrospectively in accordance with the Shareholders' Agreement.

The dilution mechanism under the Shareholders' Agreement is based on the relative cumulative contributions of the shareholders since inception, rather than solely on future funding requirements. As a result, given the significant level of capital already invested in the project to date, dilution resulting from a shareholder not participating in a given program and budget is expected to occur gradually.

Pursuant to the Shareholders Agreement, the business of MSA will be to conduct the exploration of MSA's properties and potential new properties in the immediate vicinity of the existing properties, evaluate the possible development on the properties, and take the necessary steps to develop, construct and operate a mining operation on the properties. The Shareholders' Agreement provides that the board of MSA be comprised of five directors, two of which are nominated by Minsud and three are nominated by South32. The board of MSA is responsible for managing the affairs of MSA and the Chita Valley Project.

Each year, MSA is required to prepare a program and budget that sets out the operations and planned expenditures of MSA for that year which includes the exploration program for the Chita Valley Project. The shareholders of MSA are required to fund the expenditures on a yearly basis based on their percentage interest in MSA. Should a shareholder fail to fund their required portion of the yearly program and budget then it will suffer dilution of its percentage interest in accordance with the terms of the Shareholders' Agreement.

If the percentage interest of a shareholder of MSA is reduced to less than ten percent (10%) other than as a result of a transfer of shares as permitted by the Shareholders' Agreement, the shareholder is required to surrender its interest in MSA for cancellation, and in exchange for such interest the surrendering shareholder will be entitled to a two percent (2%) NSR on products produced and sold from the Chita Valley Project. A copy of the Shareholders' Agreement can be found on the Company's profile at www.sedarplus.ca.

EXPLORATION ACTIVITIES & SUMMARY DEVELOPMENTS DURING THE PERIOD ENDED JUNE 30, 2026

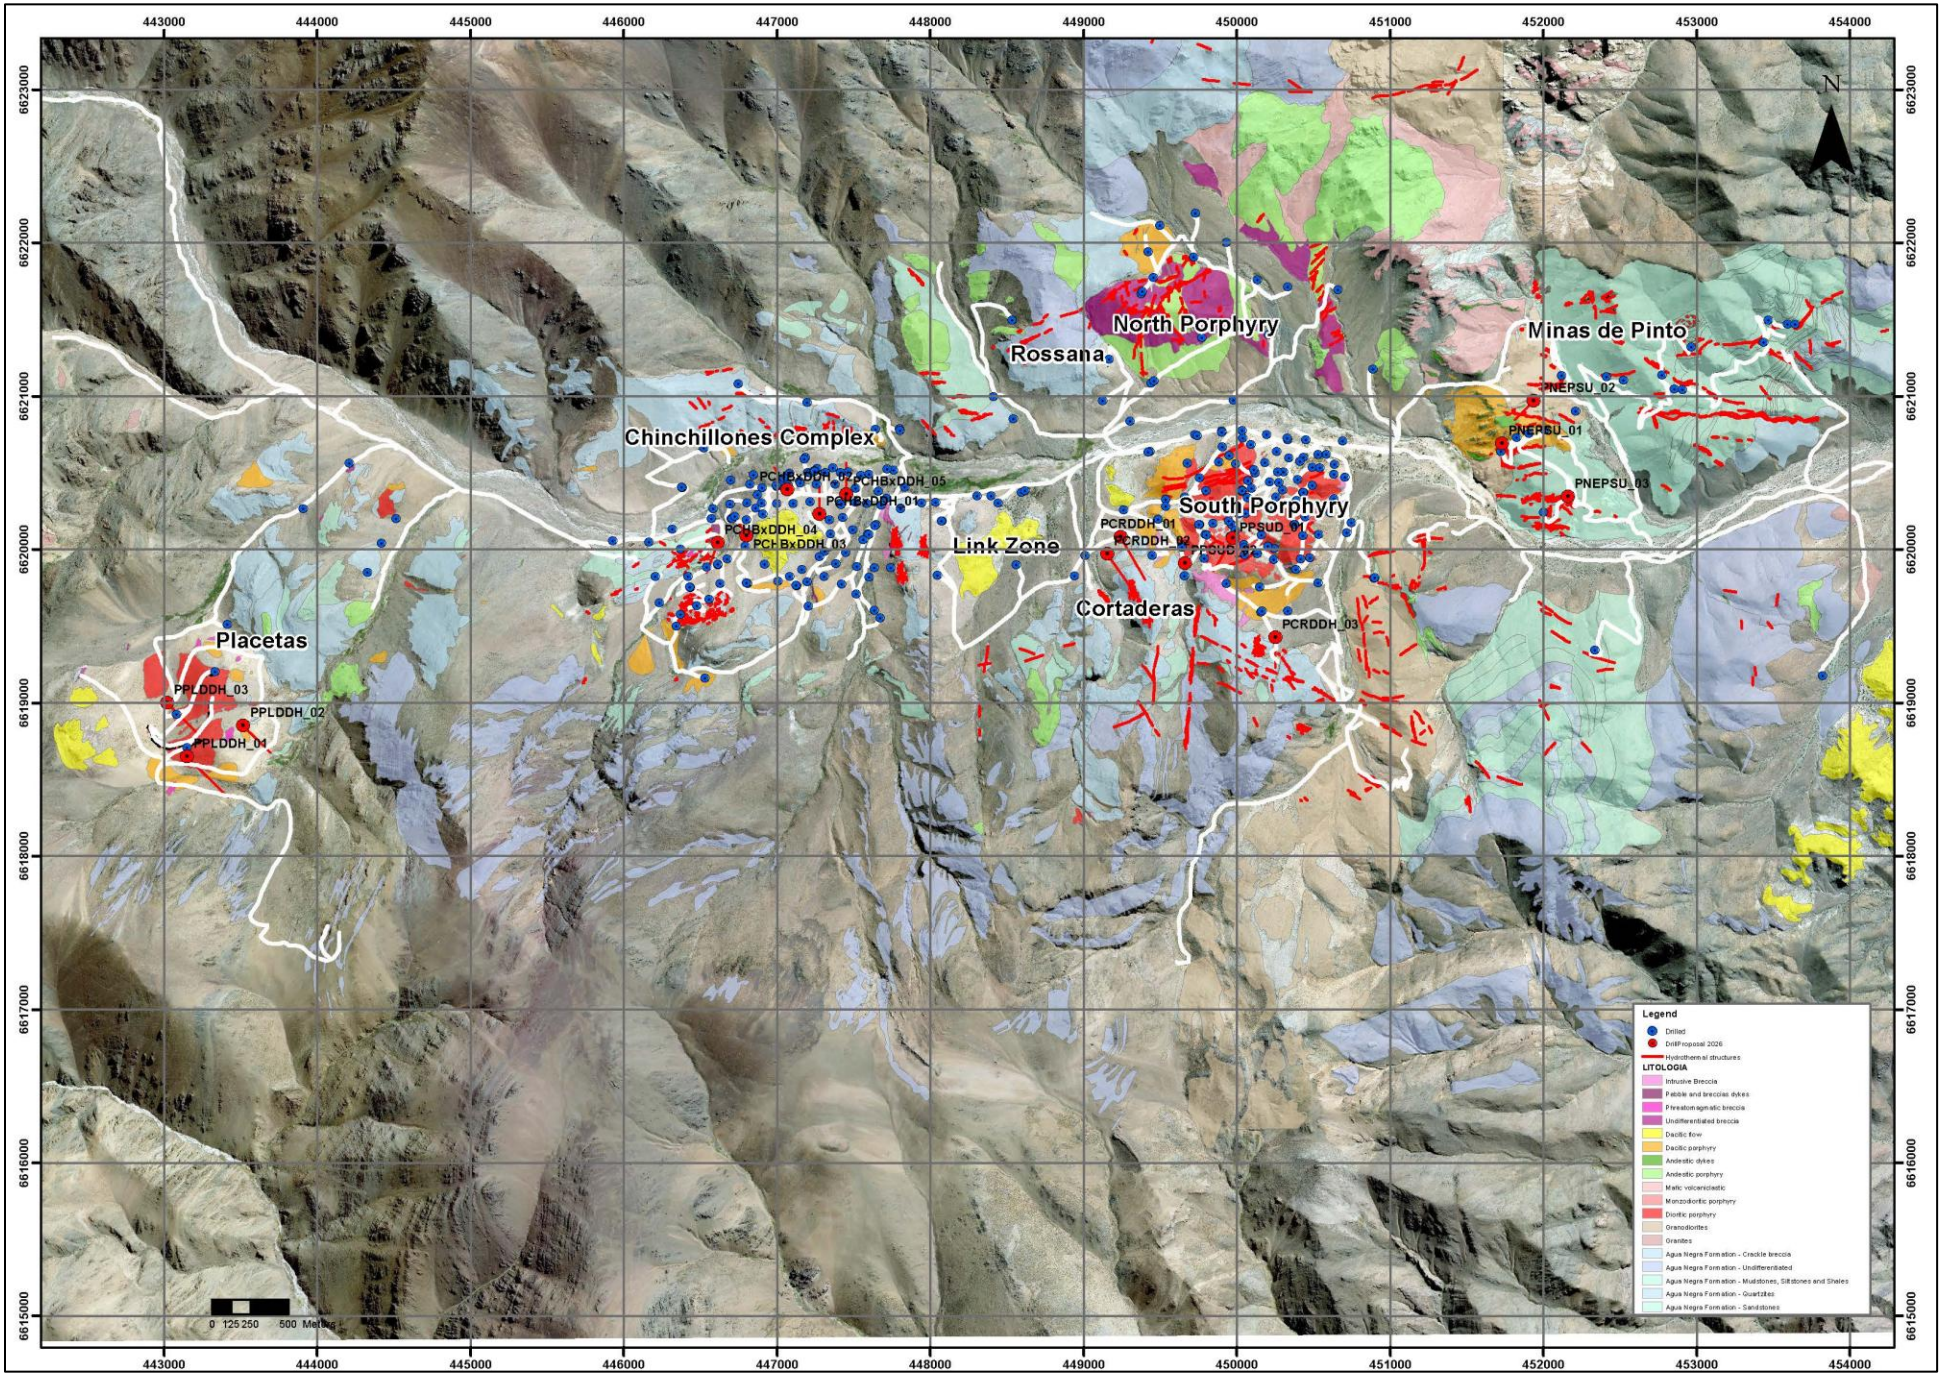
The Chita Valley Project comprises porphyry copper–molybdenum–silver deposits and affiliated polymetallic (Zn-Pb-Cu-Ag-Au) epithermal deposits situated in Argentina's highly prospective Andean belt, within the transitional zone between the Frontal Cordillera and the Pre-Cordillera. The Project lies at the onset of the Chilean–Pampean flat-slab subduction segment of the central Andes. This flat-slab segment, together with its orogen-transverse structural architecture, provided the fluid and magma pathways and the emplacement framework for the most important porphyry copper systems in the region.

The Project area is underlain by a thick-skinned thrust system that exposes Palaeozoic and Triassic rocks, overlain by Mesozoic and Cenozoic volcanic and sedimentary successions. Mineralisation comprises Cu-Mo (Au) porphyry and Cu-Au-Ag-Zn-Pb epithermal systems, together with multiple exploration targets associated with multi-staged, multi-phase late Miocene intrusions and related breccias. The calc-alkaline intrusions range from dioritic to dacitic in composition. The progenitor intrusions were emplaced into a thick pile of metamorphosed sedimentary rocks of the Permo-Carboniferous Agua Negra Formation and into the granitic, granodioritic and tonalitic bodies of the Permian Colanguil Batholith.

The Chita Valley deposits and prospects occur in clusters defined largely by NE- and WNW-trending structural corridors. The variable exhumation and preservation levels documented across the Project indicate differential erosional removal along this segment of the Frontal Cordillera as the stress regime shifted from extension and strike-slip to compression (Map 1).

The late Miocene Chinchillones deposit hosts a complex interplay of porphyry Cu-Mo mineralisation with superposed Zn-rich polymetallic intermediate-sulphidation mineralisation and Cu-Au-Ag linear veins and vein breccias of high-sulphidation style. The system occupies an area 2.7 km long along a NE-SW trend and 1.7 km wide, with mineralisation extending to a vertical depth of 1.3 km. Chinchillones is a magmatic-hydrothermal system formed from several magmatic and hydrothermal pulses during the late Miocene. New U-Pb and Re-Os geochronology from the porphyries indicates at least four discrete intrusive events over a magmatic lifetime of approximately 1.5 million years, comprising, from oldest to youngest: (i) 8.5 ± 0.2 Ma quartz diorite porphyry; (ii) 7.8 ± 0.1 Ma diorite porphyry, dacite porphyry and intrusion breccias; (iii) a 7.6–7.5 Ma molybdenite pulse; and (iv) a 7.3 ± 0.1 Ma dacite porphyry dome and diatreme breccia complex. Substantial uplift, in excess of 2 km, is interpreted to have occurred immediately after the first and second magmatic events.

The supergene-enriched Chita South Porphyry (PSU) Cu-Mo-Au deposit is largely underlain by a secondary biotite-magnetite-chalcopyrite-molybdenite assemblage within a potassic core; the advanced argillic and white mica–secondary silica zones associated with the superposed epithermal mineralisation have largely been removed by erosion. The supergene-enriched zone extends 1.5 km by 1.3 km in surface area, with thickness varying from 10 m to 150 m before transitioning into primary alteration and mineralisation. Salient features of the supergene-enriched zone include: (i) a largely immature enrichment profile; (ii) the ubiquitous presence of chalcocite-digenite and covellite replacing primary copper sulphides; (iii) pyrite in quartz-sulphide veins and veinlets and as abundant fine disseminations; and (iv) the presence of copper oxides, copper silicates, hydrous copper phyllosilicates and hydrous copper sulphates, for example chrysocolla, chalcanthite, azurite and turquoise.



Map 1: *Chita Valley regional Map*

Work program completed during the period ended June 30, 2026:

The principal property-related activities during the six months ended June 30, 2026 included the following:

Updated Resource Estimation for Chinchillones and South Porphyry deposits:

On April 13, 2026, the Company reported its updated Mineral Resource estimates over its two deposits (Chinchillones polymetallic Cu-Ag-Zn-Pb-Au deposit and Chita South supergene-enriched Cu-Mo-Au-Ag deposit) at the Chita Valley Project effective February 20, 2026. These two deposits are merely 2 kms apart. This milestone marks a highly significant progress in the Chita Valley Project's ongoing development.

On a consolidated and attributable basis, contained metal in the Indicated and Inferred Mineral Resource categories totaled:

- **Indicated Resources: 1,033 Kt copper equivalent**, consisting of 540 kt Cu, 8.0 kt Mo, 73.2 MOz Ag, 754 kOz Au, and 375 kt Zn; and
- **Inferred Resources: 3,333 kt of copper equivalent,** consisting of 2,024 kt Cu, 65.4 kt Mo, 195.8 MOz of Ag, 2,051 kOz of Au, 719 kt of Zn.

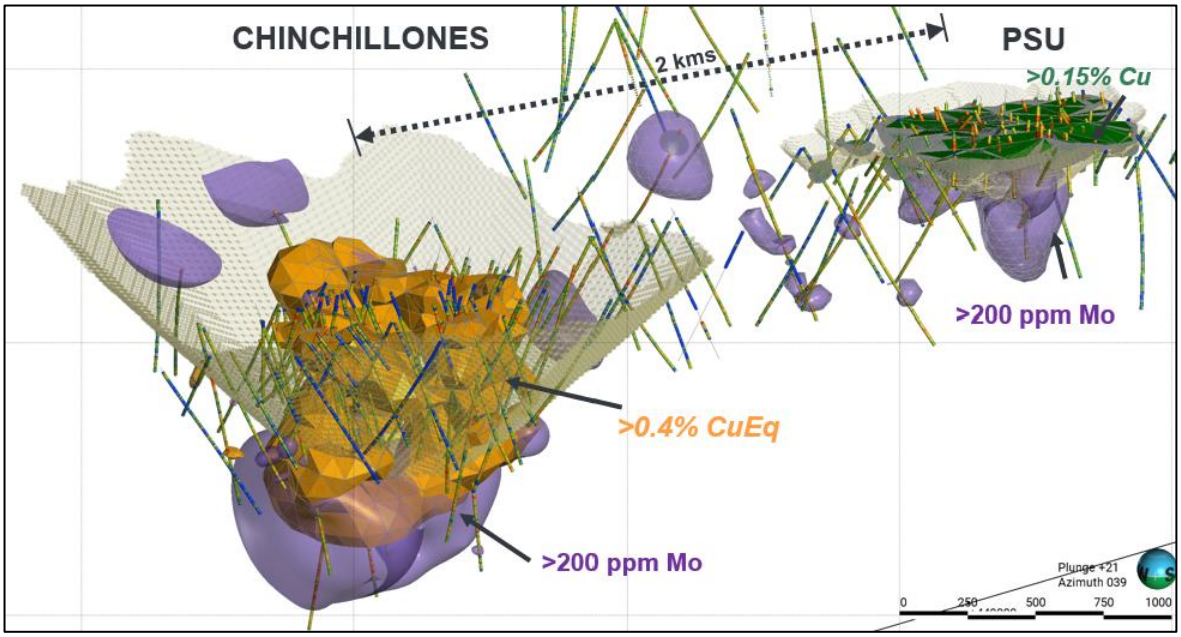
i) Chinchillones Polymetallic (Cu-Zn-Ag-Au Deposit)

- **Indicated Resources:** 30.7 % increase; 1,014 kt CuEq consisting of 521 kt Cu, 8.0 kt Mo, 73.2 MOz Ag, 754 kOz Au and 375 kt Zn @ 0.44 CuEq % (0.22 % Cu, 10.1 ppm Ag, 0.1 ppm Au, 34.3 ppm Mo, 0.16% Zn).
- **Inferred Resources:** 37.8% increase; 2,823 kt CuEq consisting of 1,514 kt Cu, 65.4 kt Mo, 195.8 MOz Ag, 2,051 kOz Au and 719kt Zn @ 0.36 CuEq % (0.19% Cu, 8.1 ppm Ag, 0.08 ppm Au, 83.7 ppm Mo, 0.09% Zn).
- The resources are considered suitable for open-pit mining and flotation process, based on Net Smelter Return cutoffs, with copper equivalent calculated post-estimation using the same pricing and recovery parameters as for the NSR.
- Copper, silver, and gold are the primary contributors to the Mineral Resource Estimate, with molybdenum and zinc as secondary contributors.
- Mineralization remains open at depth, with further molybdenum potential identified in unexplored areas.
- High-grade breccias remain under-drilled and open along strike, up- and down-dip.

ii) Chita South Porphyry (PSU) Supergene-enriched Deposit (Cu)

- **Indicated Resources:** 19 kt Cu @ 0.30% Cu
- **Inferred Resources:** 510 kt Cu @ 0.29% Cu
- Mineralization remains open at depth, with further coherent molybdenum potential identified in the deposit's central area.
- Mineralization appears open along strike to the southwest with significant surface geochemistry.

A 3D representation of the open-pittable resources at the Chita Valley project is illustrated in Map 2 below:



Map 2:*.3D representation of the open-pittable resources at the Chita Valley project. The PSU and Chinchillones deposits are merely 2 kms apart.*

The total combined summary MRE for the Chita Valley Project is shown in Tables 1 thru Table 5 - the economic grades of the Mineral Resource Estimate (MRE) have been reported above Net Smelter Return (NSR) cut-offs that vary by deposit and domain. These NSR cut-offs are:

- Chinchillones low zinc geological domain - US$10.00/tonne
- Chinchillones high zinc geological domain - US$11.65/tonne
- PSU secondary enriched domain – US$7.10/tonne

Both the Chinchillones Complex and PSU deposits demonstrate reasonable prospects for eventual economic extraction ("RPEEE"), as defined by the Committee for Mineral Reserve International Reporting Standard. This evaluation is based on drilling conducted by MSA between 2020 and 2025, supplemented by earlier drill holes. The estimate is supported by preliminary metallurgical studies and economic parameters, mining costs, processing costs, and metal recoveries from Cu, Mo, and Zn concentrates to derive Net Smelter Return ("NSR").

The updated Mineral Resource Estimate was prepared by Mr. Michael Job, Principal Geology and Geostatistics, a full-time employee of Cube Consulting Pty Ltd, in collaboration with GeoEstima SpA. As a Qualified Person (QP) under NI 43-101 standards, Mr. Job oversaw all aspects of the Mineral Resource Estimation.

Notes:

(1) The Qualified Person for the Mineral Resource Estimate is Michael Job, FAusIMM, a Director of Cube Consulting Pty Ltd. The estimate is reported using the 2014 CIM Definition Standards. The effective date of the Mineral Resource Estimate is 20 February 2026.

(2) The Mineral Resource estimate is reported on a 100% basis for the joint venture company Minera Sud Argentina S.A, with a wholly owned subsidiary of South32 Limited's attributable interest of tonnage and grade 50.1% and Minsud Resources Corp's attributable interest of tonnage and grade 49.9%.

(3) Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues. It is noted that no specific issues have been identified as yet.

(4) The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve.

(5) The Mineral Resources in this report were estimated using the Canadian Institute of Mining, Metallurgy and Petroleum (CIM) Estimation of Mineral Resources & Mineral Reserves Best Practice Guidelines.

(6) The resource is reported above Net Smelter Return (NSR) cut offs – for the low zinc geological domain US$10/t (US$9/t milling + US$1/t G&A), for the high zinc geological domain US$11.65/t (US$10.65/t milling + US$1/t G&A), and – for the enriched secondary domain at PSU US$7.10/t (US$6.10/t leaching/cathode + US$1/t G&A) An

optimized pit shell was utilized to constrain Mineral Resource reporting that used a US$1.90/t mining cost, the above milling/G&A costs and with overall 45-degree pit slopes.

(7) The metal prices used for the NSR calculation in US$ are $4.363/lb Cu, $2,995.12/oz Au, $37.34/oz Ag, $19.80/lb Mo, $1.236/lb Zn. Metallurgical recoveries for the low zinc domain are 87% Cu, 40% Au, 65% Ag, 50% Mo. Metallurgical recoveries for the high zinc domain are 60% Cu, 40% Au, 70% Ag, 55% Zn. Metallurgical recoveries for the enriched secondary domain at PSU are 75% Cu.

(8) The copper equivalent (CuEq) grades use the metal prices and recoveries as used for the NSR calculation; for the low zinc domain CuEq_% = Cu_% +(Au_ppm x 0.4603) + (Ag_ppm x 0.0093) + (Mo_ppm x 0.00026). For the high zinc domain, CuEq_% = Cu_% +(Au_ppm x 0.6675) + (Ag_ppm x 0.0146) + (Zn_% x 0.000026). Note that Zn is not recovered in the low zinc domain, and Mo is not recovered in the high zinc domain at Chinchillones. For the enriched secondary domain at PSU CuEq_% = Cu_%.

(9) The value contribution of each metal to the project can be derived from the NSR calculation. These are: Cu 59%, Ag 20%, Au 11%, Mo 6%, Zn 4%.

(10) The figures in the above tables may not add up due to rounding.

Mapping

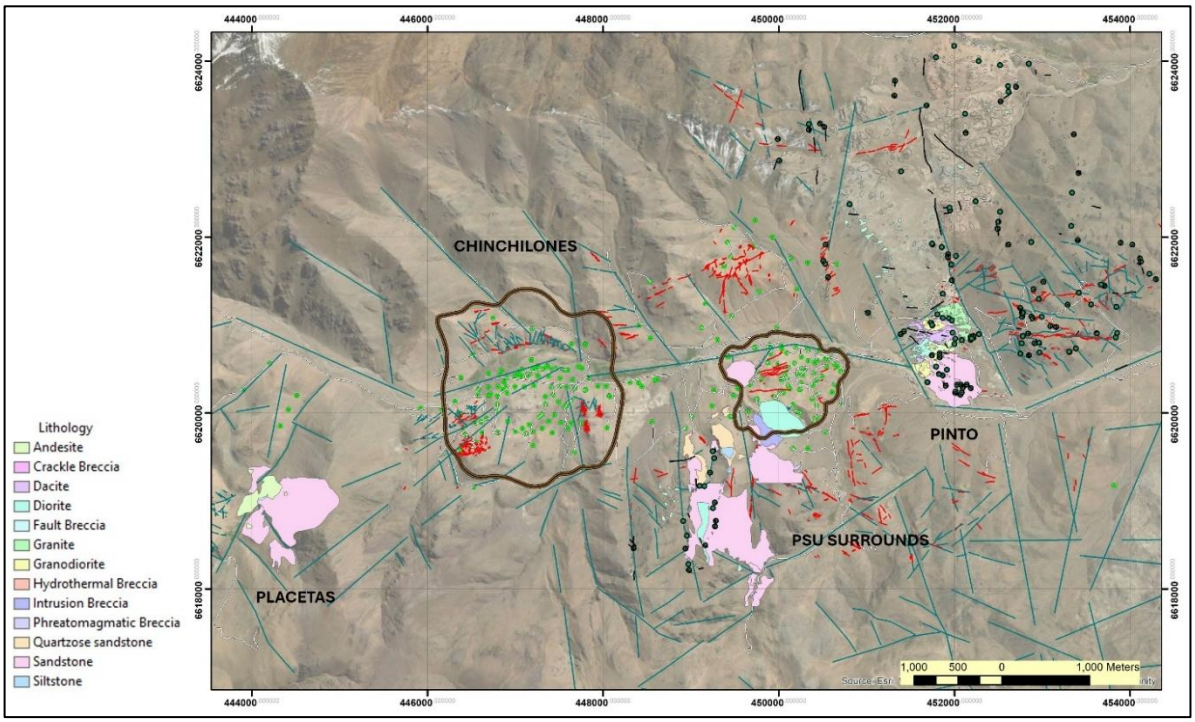
During the period ended June 30, 2026, MSA completed detailed mapping over the principal prospect areas. The programme covered the Placetas Central, PSU surrounds, Cortaderas and Pinto target areas, encompassing approximately 4.9 km² (493 ha), and recorded lithological units, alteration and mineralisation characteristics, and structural data (Map 3).

The mapping programme established lithological descriptions, alteration and veinlet assemblages, spatial locations and supporting photographic documentation.

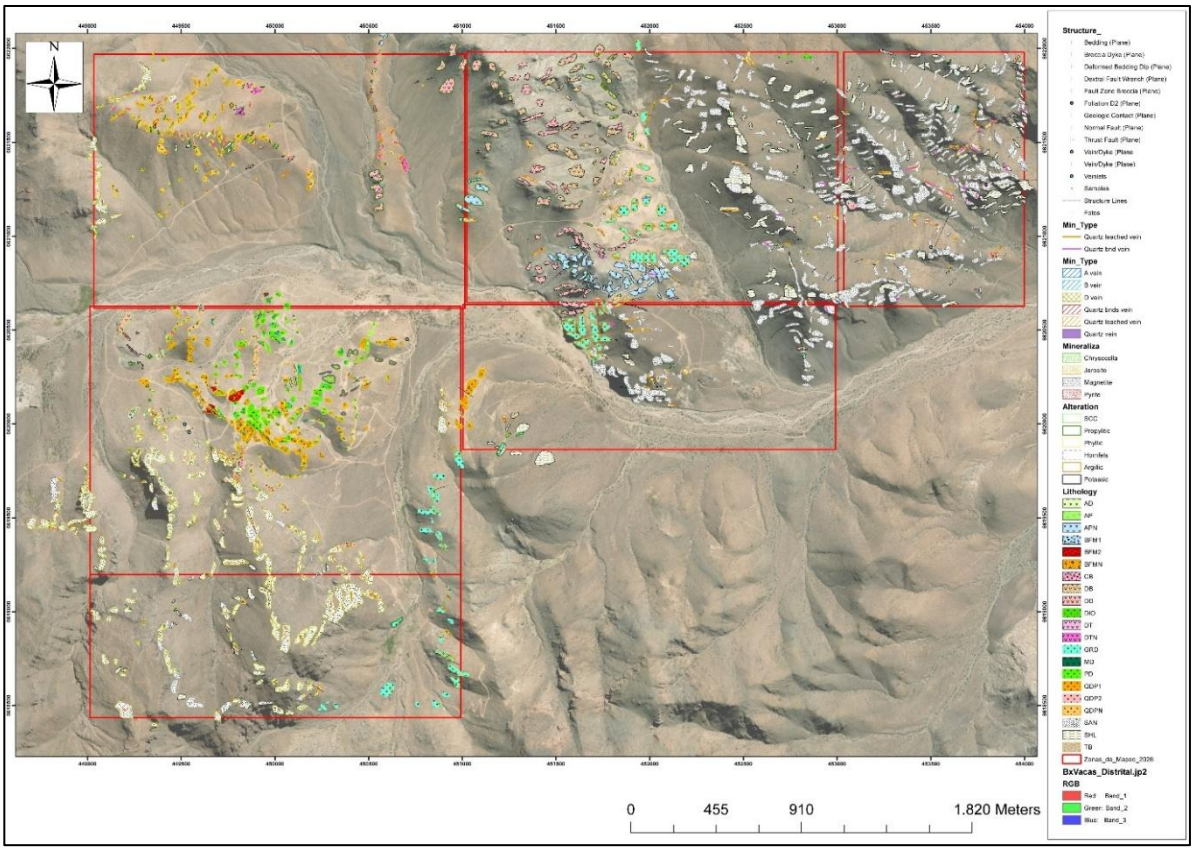
Mapping at 1:5,000 scale differentiated three geological blocks (Map 4):

- Eastern Block – characterised by Carboniferous sedimentary sequences displaying slight hornfelsing and/or silicification. This block is associated with epithermal systems of intermediate- to low-sulphidation character.
- Central Block – composed of Permian–Triassic plutonic intrusives, subsequently intruded by subvolcanic bodies. These have been affected by low- to intermediate-sulphidation epithermal events, with local, structurally controlled high-sulphidation systems.
- Western Block – dominated by porphyry-type magmatic-hydrothermal systems, on which later high-sulphidation epithermal events are superimposed.

During the campaign, 2,758 structural and vector measurements were collected and approximately 493 ha were mapped, comprising 39 ha at Placetas Norte (PNO), 433 ha at Minas Pinto and 21 ha of mapping and follow-up work at PSU (Map 4).



Map 3: *Detailed mapped principal target areas*



Map 4: *Mapping blocks and lithological units.*

Breccia units recognised at PSU

In the northwestern sector of PSU, a breccia unit designated as BFM 1 was recognised, elongated to the northeast in coincidence with a master structure. It has a fine matrix of rock flour, locally with a porphyritic quartz-dioritic component. The unit is characterised by clasts of the metasedimentary and porphyry sequence carrying few early veinlets (present in approximately 20% of clasts, up to 30 cm across), with occasional refractory B-type veinlets. Clasts of porphyritic character show strong phyllic alteration with few early "AB" veinlets and are associated with the intrusive designated QDP1. The phreatomagmatic unit is affected by moderate phyllic alteration, with D-type veining cutting the rock volume. On this basis, BFM 1 is interpreted as pre-mineral with respect to the PSU magmatic-hydrothermal system.

A second phreatomagmatic breccia, designated as BFM 2, is located in the south-central part of PSU and is elongated to the northeast. Its clast population includes refractory smoky quartz veinlets up to 2 cm thick (B-type), clasts of porphyritic texture with early veinlets up to 3 m in diameter, clasts of porphyry with potassic alteration and few veinlets, and clasts of quartzite. The matrix is composed mainly of disaggregated material, locally with a porphyritic texture, in which silica injections were recognised. The unit is mineralised with copper sulphates, carbonates, silicates and oxides, together with molybdenite, associated with the clast framework. On the basis of these characteristics, BFM 2 is interpreted as post-mineral within the PSU porphyry hydrothermal assemblage.

The contact breccia (CB) located south of PSU was traced a further 500 m to the southeast, maintaining a lateral relationship with the metasedimentary host rock. The nature of the unit was confirmed and it is interpreted as an intrusive contact breccia associated with the emplacement of QDP1.

Surface geochemistry, PCA and prospectivity modelling

In conjunction with the mapping programme, surface samples were collected. Exploratory data analysis (EDA), principal component analysis (PCA) and prospectivity modelling were undertaken on all surface samples collected to date.

The dataset comprises 2,152 rock samples with 39 elements analysed, from which seven priority pathfinder elements were selected. Summary results are presented in Maps 7 and 8 below.

August 2026 drilling programme

On August 20, 2026, MSA commenced a 10,500 m diamond drilling programme targeting both the expansion and the potential upgrading of the existing Mineral Resource base, and the testing of multiple priority targets across the broader Chita Valley porphyry-epithermal system.

The programme will test four priority areas: Chinchillones (4,600 m), Placetas (2,150 m), Chita South Porphyry – PSU (2,250 m) and Pinto (1,500 m).

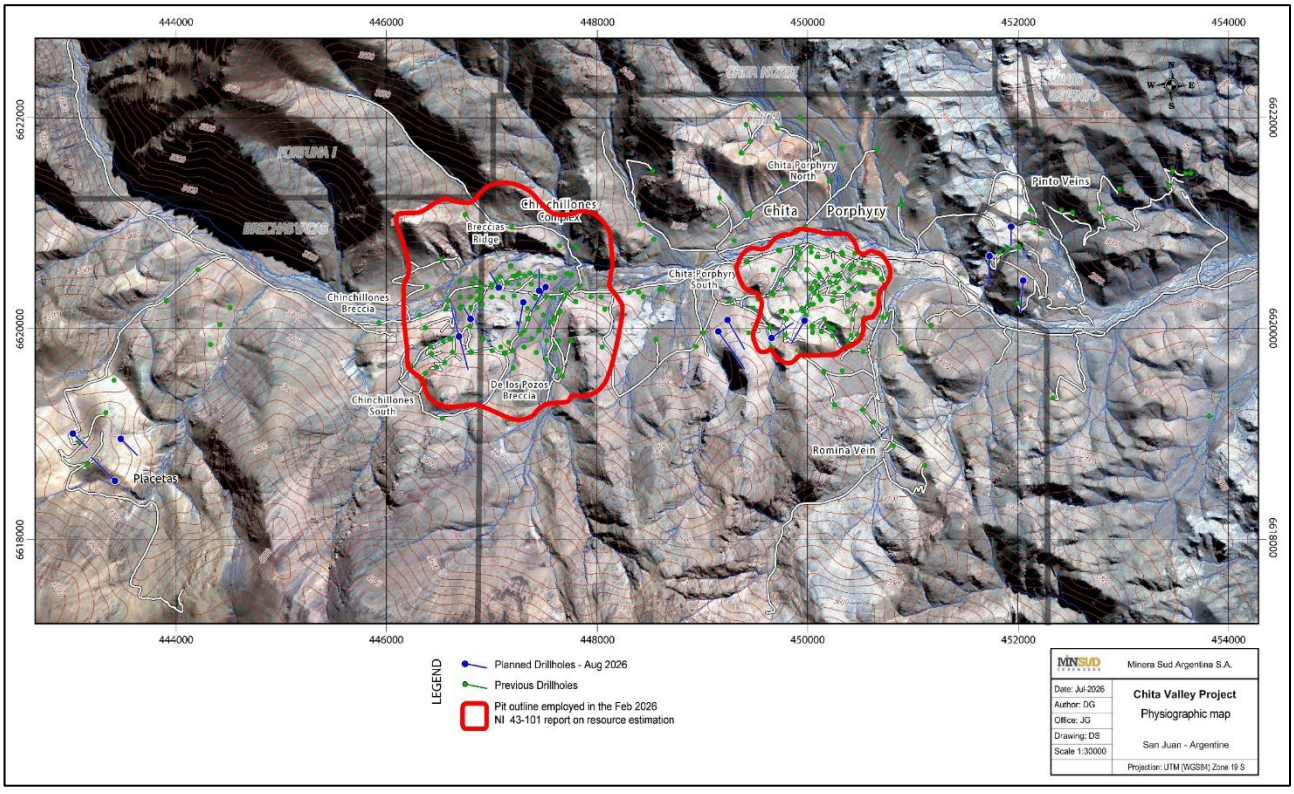
- **Chinchillones.** The planned programme includes 4,600 m of diamond drilling to confirm the strike and the up-dip and down-dip extensions of several high-grade Cu-Au-Ag-Zn-Pb hydrothermal breccia bodies identified in previous drilling.

These hydrothermal breccias host long intervals of zoned, high-grade polymetallic mineralisation. This is exemplified by the hydrothermal breccia intersected in drillhole CHDH23-69, which returned 786.0 m at 0.43% Cu, 368 ppm Mo, 0.23 g/t Au and 15.78 g/t Ag from 456 m to 1,242 m and remains open at depth (see news release dated 8 May 2023), including:

- 160.0 m at 0.35% Cu, 0.34 g/t Au, 45.72 g/t Ag, 3.58% Zn and 1.25% Pb from 456 m; and
- 166.3 m at 1.35% Cu, 0.54 g/t Au, 26.63 g/t Ag and 181 ppm Mo from 616 m.

Detailed re-logging of drill core, including the textural and geochemical zonation from brecciated wall rock through proximal zones to central breccia zones, indicates that these breccia bodies remain open to further testing and may present an opportunity to expand Mineral Resources.

- **Placetas.** At the Placetas porphyry copper prospect, 3.5 km southwest of the Chinchillones deposit, detailed mapping confirmed prospective dioritic and dacitic lithologies similar to those hosting the Chinchillones polymetallic deposit. Scout drilling of 2,150 m is planned.
  - A grid soil survey comprising 206 samples collected at 100 m intervals outlined a coherent Cu-Mo-Au anomaly at least 1 km long and 0.5 km wide. Importantly, this multi-element anomaly coincides with an ENE-trending fault zone separating dioritic rocks to the northwest from dacitic rocks to the southeast – a setting closely comparable to the controls observed at the Chinchillones polymetallic deposit.
- **Chita South Porphyry (PSU).** Detailed mapping, conducted in conjunction with surface geochemistry, has identified under-tested intrusive centres with associated hydrothermal breccias hosting porphyry-related B-type quartz-sulphide veinlets. A total of 2,250 m of drilling is planned.
- **Pinto.** At the Pinto epithermal-porphyry prospect, detailed mapping identified auriferous linear high-sulphidation zones occupying faults and faulted contacts between Permian granitoids and late dacite porphyry domes. The magnetic footprint indicates that these linear high-sulphidation zones occur on gradients and shoulders to magnetic highs and are interpreted to be prospective sites for associated porphyry copper emplacement. A total of 1,500 m of scout drilling is planned.



Map 5: *Planned drilling program at the Chita project.*

Roadmap (next steps)

The roadmap for the remainder of fiscal year 2026 and fiscal 2027 includes the following:

- Enhance the Chinchillones metal grade profile through detailed evaluation of the high-grade hydrothermal breccia bodies, leading to a robust, optimally targeted drilling programme.
- Investigate the open deeper extensions of the porphyry Cu-Mo systems at Chinchillones and Chita South Porphyry (PSU), leading to an effective deep drilling programme, particularly in areas where Cu-Mo mineralisation has not been fully delineated.
- Undertake more detailed systematic work over the identified prospective targets, leading to a scout drilling programme.
- Complete the prospectivity evaluation for the Minera Sud Argentina S.A. property.
- Conduct an AI-supported targeting exercise in collaboration with the Minera Sud Argentina S.A. technical team.
- Advance metallurgical testwork for Chinchillones and PSU. Chemical analysis of the samples used for leach testing, together with sequential analyses, indicates that flotation should deliver good copper recoveries with high copper concentrate grades and lower arsenic content than the Chinchillones material.
- Complete water baseline studies.

Work program completed during fiscal year 2025:

The principal exploratory activities during the fiscal year ended December 31, 2025 included the following:

- Resource delineation drilling and regional scout drilling program on the following:
  - Chinchillones polymetallic deposit in-fill and extension: six (6) drillholes encompassing ***3291m***
  - Chita Porphyry (PSU) supergene-enriched deposit in-fill and extension: twenty (20) drillholes encompassing ***6013m***
  - Placetas Norte Target Area: Five (5) drillholes encompassing ***2830m***
  - Placetas Central: One (1) drillhole at a total depth of ***600m***
- Placetas Grid Soil Sampling:
  - Placetas Central covering 1.6kms x 1.4kms at 100m intervals with ***214 samples***
  - Hyperspectral analyses of ***55 rock samples***
- Detailed Mapping in Conjunction with Surface Rock geochemistry:
  - Placetas Norte and Placetas Central covering *4kms x 3 kms area*
  - Mapping of Western Chinchillones deposit
- Re-logging of Chita South (PSU) drillholes:
  - Established mineralogical domains from surface through to the primary zones which has served as bases to the PSU mineral resource estimation
- Regional Targeting Exercises:
  - Prospectivity analyses of the various geological, geochemical and geophysical layers identified prospective corridors
  - Drill-ready targets identified

Geological Data

i) Chinchillones

For the NSR calculations at Chinchillones, the geological domains were separated into low and high zinc domains – most of the resource is within the low zinc domain, with the high zinc domain a smaller discrete zone. Copper concentrate would be sourced from both the low and high zinc domains, but it was assumed that

zinc concentrate would only be sourced from the high zinc geological domain, with different recoveries and processing costs compared to the low zinc domain.

Lithological and alteration 3D models do not strongly control copper mineralization, as grades vary significantly within and across these domains, making them unsuitable for estimation. To address this, a Cu-As-Ag high-sulfidation envelope was created using a proxy based on Cu, As, Sb, S, and Fe, enabling the identification of high-sulfidation signatures in both drilling and block models. Additional Mo and Zn-Pb grade shell envelopes were also developed. The final estimation domains are combinations of the high-sulfidation and Mo/Zn-Pb grade shells, as defined through statistical similarities and domain boundary analysis.

ii) Chita South Porphyry (PSU)

For the secondary enriched domain, it was assumed that only copper cathode would be recovered (75%) with no other by-products recovered. Additional metallurgical testwork will be conducted at PSU to ascertain amenability of the immature supergene-enriched domain at PSU to flotation and conventional leaching test.

Principal Supergene-enrichment Domains Characteristics:

- The largely immature supergene-enriched zone extends 1.2kms x 1.1kms. It is characterised by the presence of chalcocite-digenite and covellite in quartz-sulfide veins/veinlets and as multitudes of minute disseminations. The supergene-enriched domain ranges from 10 to 150m thick.
- The leached capping is up to 50m thick and consists of variable amounts of hematite, goethite and jarosite with minor supergene copper minerals.
- The supergene clays, (kaolinite, illite and smectite and iron sulfates) make up less than 5 vol% of rock; the subdued supergene clay content contributes to the high copper recoveries (>80%, up to 95%) achieved in the metallurgical leaching tests and sequential copper analyses.

The Chita South Porphyry area has disseminated and stockwork mineralization. The disseminated mineralization is homogeneously distributed in the porphyry matrix surrounding breccia clasts. Mineralization occurs in sub-1mm crystals and is principally comprised of pyrite + molybdenite + chalcopyrite. Disseminated sulphides are commonly associated with phases of porphyritic andesites and coincides with potassic alteration.

The stockwork mineralization is associated with two principal sets of fractures. The E-W system (100°) is the dominant system and produced strong calcification and jointing in the porphyry, mainly along the north-northwest border. The second fracturing system runs NW (320° to 330°) and predominantly occurs along the south border.

The Cu mineral resources in the south Chita South Porphyry sector comprise a combination of copper oxides, supergene (chalcocite/digenite) and primary (chalcopyrite) copper sulphides.

<u>High-grade Hydrothermal Breccias at Chinchillones</u>

Re-evaluation of the alteration-mineralization characteristics, distribution and geometries of the documented high-grade hydrothermal breccia bodies at Chinchillones indicates these remain open along strike, up-dip (to shallower levels; Map 10 and Photograph 1) and down-dip directions with several untested targets identified. The high-grade breccias host high-grade mineralization as demonstrated by:

- Bxa 69: Ave *1.91 CuEq*% (N=424; 0.47%Cu, 0.25 gpt Au, 31.6 gpt Ag, 167 ppm Mo, 1.89% Zn, 0.43% Pb); N represents the number of sample analyzed, generally 2m-intervals
- Bxa 122: Ave 0.82 CuEq% (N=257; 0.17% Cu, 0.13 gpt Au, 20.6 gpt Ag, 30 ppm Mo, 0.60% Zn, 0.03% Pb)
- Bxa 96: *Ave 0.97 CuEq%* (N=162: 0.89% Cu, 0.26 gpt Au, 5.77 gpt Ag,34 ppm Mo, 0.04% Zn, 0.0075% Pb)

Drilling of the high-grade breccias reflects an early-stage understanding of breccia geometry and mineralization controls, highlighting strong potential for optimization as knowledge advances.

The review confirms that the principal high-grade breccias remain open along strike, as well as both down-dip and up-dip, with several targets yet to be drill-tested. This underexplored potential suggests that both the volume and grade of these breccias could have a transformative effect on the economic outlook of the deposit. For example, Bxa 69 breccia body, which is interpreted to extend up to 500 meters in length and 150 meters in width (assuming a steep geometry) with a vertical column exceeding 750m. This geometry could represent more than 140 million tonnes of mineralized material. However, current drilling has only tested about 150 meters of strike length - just 25% of its projected extent - highlighting the substantial opportunity for resource expansion through targeted exploration.

Other Valid Targets Identified from 2025 Exploratory Activities

Ground-based exploration activities in 2025, combined with prior geophysical and geochemical surveys, have identified additional porphyry and higher-grade Au-Ag epithermal targets. The surveys conducted in 2025 consisted of detailed mapping, IP survey, rock geochemistry and soil geochemical surveys focused on Placetas, Placetas Norte, and the Romina and Chinchillones prospective porphyry-epithermal corridors.

Mapping of total iron with Landsat 8 imagery has identified the principal deposits and targets (Map 11). Importantly, the mapped total iron has also highlighted additional target areas, with high-intensity iron potentially representing sulphides in hydrothermally perturbed areas. The anomalous areas are discordant to the primary lithological fabric (e.g., primary bedding). Thus, the total iron serves as a proxy for the sulphidic footprint.

Ground-based exploration activities in 2025, combined with prior geophysical and geochemical surveys, have identified additional porphyry and higher-grade Au-Ag epithermal targets. The surveys conducted in 2025 consisted of detailed mapping, IP survey, rock geochemistry and soil geochemical surveys focused on Placetas, Placetas Norte, and the Romina and Chinchillones prospective porphyry-epithermal corridors.

The geological, geophysical and geochemical synthesis conducted has identified two highly prospective mineralized corridors:

- *Chinchillones Corridor:* a NE-trending, 10km-long, 2,5km-wide corridor hosts the polymetallic Chinchillones deposit and the Placetas prospects, with the governing NE-SW structural fabric expressed as mineralized sympathetic veins, and linear hydrothermal breccias. At Chinchillones, the high sulphidation mineralization, polymetallic intermediate sulphidation veins, linear breccias and porphyry-related B-, A-, C-type veins are apparently controlled by NE-, EW-trending faults.

- *Romina Corridor*: a WNW-trending, at least 7km-long, at least 1.4 km-wide corridor hosting clusters of prospective intrusion centers (identified from mapping, magnetics, IP conductivity and remotely based hyperspectral analyses) and higher-grade Au-Ag epithermal veins, vein breccias and sulphidic hydrothermal linear bodies. This corridor hosts the newly identified Cortaderas PCD-epithermal prospect. At Cortaderas, the interpreted intrusion centers coincide with high iron (Fe), circular features coincide with the anomalous magnetics highs. More significant is the results from surface geochemistry with higher-grade Au, Ag values with anomalous As, probably indicating better preserved porphyry column. The mapping also yielded linear zones of brecciated dacites hosting porphyry-related veinlets. The ring fractures around the inferred intrusion centers are coincident with mapped crackle breccias and higher-grade Au-Ag epithermal veins

  The polymetallic signature (Au-Ag-Zn-Pb-As) of the veins cutting the dacites and sediments could indicate similar emplacement evolution to Chinchillones, thus PSU most likely is an uplifted block with the exposed potassic column whilst the southern Romina corridor with still preserved high sulfidation-phyllic column.

The exploratory activities over the Placetas Cu-Mo-Au prospect present compelling drill-ready targets. The results from the grid soil survey (206 samples;100m interval grid) highlights coherent coincident, at least 1km-long, 0.5km-wide Cu-Mo-Au anomalies. Importantly these multi-element anomalies coincide with an ENE-

trending faulted zone separating the dioritic rocks in the NW with the dacitic rocks in the SE. This setting is highly reminiscent to the controls at the Chinchillones polymetallic deposit.

There is a significant fault-controlled EW-trending magnetite-destructive elongated "doughnut" coincident with a mapped dioritic porphyry intrusion, emplaced amongst an older, bigger dioritic body. This mapped younger body is interpreted to represent a protruded dyke coming off a younger, productive intrusion at depth.

SELECTED ANNUAL INFORMATION

The following selected financial data for the financial years ended December 31, 2023, 2024 and 2025 are derived from the audited Consolidated Financial Statements of the Company for the financial years ended December 31, 2023, 2024 and 2025. The amounts below reflect the consolidation of the accounts of the Company, MAI and MSA (for periods prior to the loss of control of MSA) for the periods noted.

	As at and for the Year Ended December 31, 2025 ($)	As at and for the Year Ended December 31, 2024 ($)	As at and for the Year Ended December 31, 2023 ($)
Net income (loss) for the year	(1,989,252)	8,079,386	(9,903,629)
Comprehensive income (loss) for the year	(7,962,101)	15,705,807	(10,707,777)
Income (Loss) per share, basic	(0.01)	0.05	(0.06)
Income (Loss) per share, diluted	(0.01)	0.05	(0.06)
Non-current assets	15,074,285	21,489,011	27,767,183
Current Assets	664,597	786,353	3,940,507
Non-current liabilities	-	-	-
Current Liabilities	421,503	340,406	26,734,769
Working Capital	243,094	445,947	(22,794,262)
Share Capital	20,314,827	19,400,242	19,388,155
Shareholders' Equity	15,317,379	21,934,958	4,972,921

Prior to the loss of control of MSA, the Company capitalized the expenditures on its mineral properties and presented the aggregate amounts spent as an asset on the consolidated statement of financial position. Once control of MSA was lost, the Company derecognized these capitalized amounts. While MSA continues to incur expenditures on its properties, these amounts are no longer presented in the Company's consolidated statements.

OPERATING ACTIVITIES AND FINANCIAL PERFORMANCE

During the six months ended June 30, 2026, the Company incurred total expenses of $1,023,553, which represents an increase of $242,116 when compared to expenses of $781,437 for the six months ended June 30, 2025.

Cash expenses incurred by the Company were $702,310 for the six months ended June 30, 2026, representing an increase of $161,160 for the period when compared to cash expenses of $541,150 for the six months ended June 30, 2025. The increase is a result of fluctuations in the amount of taxes paid on the Company's ownership of MSA and professional fees which were offset by a gain on foreign exchange.

The expenses of the Company that saw the most significant fluctuations year-over-year are as follows:

- Professional and regulatory fees include management salaries and fees paid for consulting fees, legal fees, CFO, as well as general accounting, audit and regulatory fees. The Company incurred professional and regulatory fees of $448,560 during the six months ended June 30, 2026, an increase of $37,170 when compared to expenses of $411,390 for the six months ended June 30, 2025. The increase is mainly related to increased consulting fees incurred during the 2026 fiscal year with respect to the preparation of the NI 43-101 Technical Report filed in April 2026.

- The Company incurred taxes on ownership of MSA of $223,924 during the six months ended June 30, 2026, which represents an increase of $211,424 when compared with the expenses of $12,500 incurred during the six months ended June 30, 2025. This tax represents 0.5% of the net assets held by a foreign company on an Argentinean subsidiary. As MSA's net assets have increased as a result of the exploration work conducted, the cost of which is capitalized by MSA, so too has the amount of tax to be payable.

- The Company incurred travel expenses of $39,021 during the six months ended June 30, 2026, a decrease of $33,408 when compared to expenses of $72,429 incurred during the six months ended June 30, 2025. The Company's senior personnel were more selective with their travel during the six months ended June 30, 2026 with respect to visits to MSA's properties, as well as other mining industry events.

- The Company had a foreign exchange gain of $33,385 during the six months ended June 30, 2026, an increase of $62,016 when compared to a loss on foreign exchange of $28,631 during the six months ended June 30, 2025. The Company's balances of cash denominated in United States dollars and vendor invoices denominated in United States Dollars were positively impacted by movements in the rate of foreign exchange between the Canadian Dollar and United States Dollar during the 2026 fiscal year.

The Company incurred the following non-cash expenses for the six months ended June 30, 2026 and 2025:

- Expenses related to share-based payments during six months ended June 30, 2026, were $321,243 an increase of $80,956 when compared to share-based payments of $240,287 for the six months ended June 30, 2025. During the six months ended June 30, 2026, the Company granted 1,300,000 stock options to directors, officers and consultants. During the year ended December 31, 2025, the Company granted 750,000 stock options to certain directors and a consultant. During the year ended December 31, 2024, the Company granted 650,000 stock options to certain directors. The fair value of these stock options will be expensed as share-based payment expense over the vesting period of the stock options. The year-over-year increase in share-based payment expense is related to the fair value of the stock options granted during fiscal 2026 and the continued vesting of the stock options granted during fiscal 2025 and 2024. More stock options were granted in fiscal 2026 than in fiscal 2025 and 2024, some of which vested immediately, which has resulted in higher share-based payment expense in fiscal 2026 compared to fiscal 2025.

- During the six months ended June 30, 2026, the Company's share of MSA's income amounted to $1,061,958 which has resulted in net income for the Company during the period ended June 30, 2026. The net income of MSA was largely due to foreign exchange fluctuations as MSA operations do not generate revenue. During the six months ended June 30, 2025, the Company's share of the loss of MSA was $53,605. The Company also recognized other comprehensive income of $430,107 for six months ended June 30, 2026, related to its share of MSA's currency translation adjustment. During the six months ended June 30, 2025, the Company recognized other comprehensive loss of $5,187,286 related to its share of MSA's currency translation adjustment.

It should be noted that, historically, the Company's foreign currency translation in accordance with IFRS has had a negative impact on the Canadian Dollar values of the MSA net assets, and the Company has reported losses related to the foreign currency translation on its consolidated statement of comprehensive loss. This negative impact is the result of the habitual trend in Argentina to devalue its currency due to high internal inflation rates. The currency translation adjustments discussed above primarily relate to amounts capitalized as mineral properties. The impact of the translation on the Company's liquid assets was minimal.

LIQUIDITY AND CAPITAL RESOURCES

The Company had a working capital deficit of $103,365 as at June 30, 2026, compared to working capital of $243,094 as at December 31, 2025. As at June 30, 2026, the Company held cash and cash equivalents of $268,808 versus $580,459 as at December 31, 2025. The Company's working capital decreased over the six months ended June 30, 2026, as spending outpaced the receipt of proceeds from a private placement and the exercise of stock options.

The Company currently does not have any externally imposed capital requirements other than its contracts entered into in the normal course of business.

As the Company does not currently generate cash flows from operations, it will once again become dependent on raising capital through the issuance of equity securities. While the Company has a supportive base on long-term shareholders who have continued to fund the Company through subscriptions for shares and warrants, there is no certainty that the Company will be able to obtain the desired level of financing. The prices of metals and minerals fluctuate widely and are affected by many factors outside of the Company's control. The prices of metals and minerals and future expectations of such prices have a significant impact on the market sentiment for investment in mining and mineral exploration companies. This is turn may impact the Company's ability to raise equity financing for its long-term working capital requirements. In the absence of raising sufficient equity financing, the Company may have to pursue a strategic partner with respect to its 49.9% interest in MSA.

During the six months ended June 30, 2026, the Company completed a private placement, pursuant to which it issued 2,060,000 common shares for gross proceeds of $1,030,000. The Company also issued 312,000 common shares pursuant to the cashless exercise of 416,000 stock options.

During the six months ended June 30, 2026, the Company granted 100,000 stock options to a consultant. The stock options are exercisable at a price of $0.48 per share, shall vest immediately, and shall be exercisable for a period of five years from the date of issuance.

During the six months ended June 30, 2026, the Company granted 1,200,000 incentive stock options to directors and consultants of the Company. The stock options are exercisable at price of $0.34 per share, all of which shall vest one-quarter on May 5, 2026, one-quarter on November 5, 2026, one-quarter on May 5, 2027, and one-quarter on November 5, 2027, and shall be exercisable for a period of five years from the date of issuance.

During the year ended December 31, 2025, the Company received subscriptions for 1,146,900 common shares at a price of $0.74 per share for gross proceeds of $848,706 pursuant to a non-brokered private placement. On July 2, 2025, the Company closed the non-brokered private placement and issued 1,146,900 common shares. No commissions or finder's fees were paid in connection with the non-brokered private placement. The proceeds will be used to continue exploring the Chita Valley Project as well as working capital and corporate overhead requirements.

During the year ended December 31, 2025, the Company granted 150,000 incentive stock options to a director and to a consultant of the Company. The stock options are exercisable at price of $0.525 per share, all of which shall vest one-quarter on July 24, 2025, one-quarter on January 24, 2026, one-quarter on July 24, 2026, and one-quarter on January 24, 2027, and shall be exercisable for a period of five years from the date of issuance.

During the year ended December 31, 2025, the Company granted 600,000 incentive stock options to certain directors of the Company. The stock options are exercisable at price of $0.60 per share, all of which shall vest one-quarter on June 6, 2025, one-quarter on December 6, 2025, one-quarter on June 6, 2026, and one-quarter on December 6, 2026, and shall be exercisable for a period of five years from the date of issuance.

During the year ended December 31, 2025, the Company issued 600,000 common shares pursuant to the cashless exercise of 715,385 stock options, and 200,000 common shares pursuant to the exercise of 200,000 stock options for proceeds of $20,000. In addition, 484,615 stock options expired unexercised.

Use of Proceeds

The Company has completed the following financing during the six months ended June 30, 2026, with no variance between projected use of proceeds and actual use of proceeds.

Date	Financing	Securities Issued	Funding (Gross)	Use of Proceeds	Variance
April 8, 2026	Private placement	2,060,000 common shares	$1,030,000	Net proceeds used to continue exploration of Chita Valley Project as well as working capital and corporate overhead requirements	None

The Company has completed the following financing during the year ended December 31, 2025, with no variance between projected use of proceeds and actual use of proceeds.

Date	Financing	Securities Issued	Funding (Gross)	Use of Proceeds	Variance
July 2, 2025	Private placement	1,146,900 common shares	$848,706	Net proceeds used to continue exploration of Chita Valley Project as well as working capital and corporate overhead requirements	None

Share Capital

As at the date of this MD&A the Company´s share position consists of:

Shares outstanding	169,267,415
Options outstanding	13,510,000
TOTAL	**182,777,415**

Stock Options Outstanding

As at the date of this MD&A the following options are issued and outstanding:

Exercise Price	Options Vested	Options Unvested	Remaining Contractual Life (Years)	Expiry Date
$0.30	2,810,000	-	0.45	February 11, 2027
$0.30	2,450,000	-	1.36	January 9, 2028
$0.375	50,000	-	1.66	April 27, 2028
$0.696	5,300,000	-	1.70	May 11, 2028
$0.872	200,000	-	1.93	August 4, 2028
$0.80	650,000	-	2.76	June 5, 2029
$0.60	450,000	150,000	3.77	June 6, 2030
$0.525	112,500	37,500	3.90	July 24, 2030
$0.48	100,000	-	4.41	January 28, 2031
$0.34	300,000	900,000	4.68	May 5, 2031
	12,422,500	**1,087,500**	**1.83**	

COMMITMENTS AND CONTINGENCIES

Services agreements with the Company's Vice-President (Exploration)

On February 7, 2025, the Company entered into a services agreement with a consultant to act as an advisor for a monthly fee of US$5,000. On June 1, 2025, the Company and the advisor signed an addendum to the services agreement to reflect the appointment of the advisor to the position of Vice-President (Exploration) for a period of twelve months. Pursuant to the addendum, the monthly fee was increased to US$8,000 and the advisor is to be granted 150,000 stock options per year subject to approval by the Company's Board of Directors and in accordance with the Company's Stock Option Plan. Either party can terminate the agreement without consequence by giving 30 days advance notice to the other party.

RELATED PARTY TRANSACTIONS

During the six months ended June 30, 2026 and 2025, the Company incurred the following related party transactions:

i) Transactions

a. Total salaries and fees of $65,087 (2025 - $63,376) was charged by Ramiro Massa, the former President and CEO, and a current director, of the Company.

b. A total of $13,300 of accounting and regulatory compliance fees (2025 - $22,800) and $12,000 of CFO fees (2025 - $12,000) were charged by Forbes Andersen Limited, a company in which Mike Johnston, the Company's CFO and Corporate Secretary, is an officer.

c. Mining Plus Peru SAC, a company previously providing the services of Vice-President (Exploration) to the Company, and a related company Mining Plus Canada Consulting Ltd., charged fees of $Nil (2025 - $56,004) and other consulting fees of $Nil (2025 - $25,663).

d. Professional fees of $67,206 (2025 - $10,914) and other consulting fees of $Nil (2025 - $28,187) were charged by Renato Bobis, the Company's Vice-President (Exploration).

ii) Period-end Balances

a. As at June 30, 2026, accounts payable and accrued liabilities included $18,252 payable to Forbes Andersen Limited, a company in which Mike Johnston, the Company's CFO and Corporate Secretary, is an officer.

b. As at June 30, 2026, accounts payable and accrued liabilities included $Nil payable to Renato Bobis, the Company's Vice-President (Exploration).

All related party transactions were in the normal course of operations. Amounts owing to related parties are non-interest bearing and have no repayment terms.

OFF-BALANCE SHEET TRANSACTIONS

The Company currently has not entered into any off-balance sheet arrangements.

BASIS OF PRESENTATION

The Company's Financial Statements have been prepared in accordance with IFRS as issued by the IASB.

The Company has not yet established whether its mineral properties contain resources or reserves that are economically recoverable. The recovery of amounts capitalized as mineral properties is dependent upon the discovery of economically recoverable resources or reserves, the ability of the Company to arrange appropriate

financing to complete the development of properties, and upon future profitable production, or alternatively, upon the Company's ability to dispose of its interests on an advantageous basis, all of which are uncertain.

The Company's ability to continue as a going concern is dependent upon, but not limited to, its ability to raise financing necessary to fund its exploration programs, maintain its mineral properties concession rights and exploration agreements with purchase options, discharge its liabilities as they become due and generate positive cash flows from operations.

The Financial Statements are prepared on the basis of accounting principles applicable to a going concern, which assumes that the Company will continue in operation for the foreseeable future and will be able to realize its assets and discharge its liabilities in the normal course of the business. Accordingly, the Financial Statements do not give effect to adjustments that may be necessary, should the Company be unable to continue as a going concern. If the going concern assumption is not used, then the adjustments required to report the Company's assets and liabilities at liquidation values could be material to the Financial Statements.

ACCOUNTING POLICIES AND CRITICAL ACCOUNTING ESTIMATES

The preparation of the Company's Financial Statements requires management to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues, and expenses. Critical accounting estimates used in the preparation of the Financial Statements are related to the recoverable value of the Company's mineral properties, as well as the value of stock-based compensation. These estimates involve considerable judgment and are, or could be, affected by significant factors that are out of the Company's control.

The Company records all of its property acquisition costs and direct exploration costs as an asset until the properties are placed into production, sold, or abandoned, at which time the costs will either be amortized on a units-of-production basis or fully charged to operations. Management reviews the carrying value of the mineral properties for impairment or permanent declines in the value of the property, such as abandonment, and the related project balances are then written off.

Estimates related to share-based payments include the volatility of the Company's stock price, as well as when stock options may be exercised. The timing of exercise of stock options is out of the Company's control and depends on various factors including the market value of the Company's shares and the financial objectives of the holders of stock options.

RISK FACTORS

There are many risk factors facing companies involved in the mineral exploration industry. Risk management is an ongoing exercise upon which the Company spends a substantial amount of time. While it is not possible to eliminate all the risks inherent to the industry, the Company strives to manage these risks, to the greatest extent possible. The following risks are most applicable to the Company but may not be the only risks faced by the Company. Risks and uncertainties not presently known by the Company or which are presently considered immaterial may also adversely affect the Company's business, projections, results of operations and/or conditions (financial or otherwise).

Industry and Mineral Exploration Risk

Mineral exploration is highly speculative in nature, involves many risks and frequently is non-productive. There is no assurance that the Company's exploration efforts will be successful. At present, the Company's projects do not contain any proven or probable reserves. Success in establishing reserves is a result of a number of factors, including the quality of the project itself. Substantial expenditures are required to establish reserves through drilling, to develop processes to extract the resources and, in the case of new properties, to develop the mining and processing facilities and infrastructure at any site chosen for mining.

Because of these uncertainties, no assurance can be given that planned exploration programs will result in the establishment of mineral resources or reserves. The long-term profitability of the Company's operations will be in part directly related to the cost and success of its exploration programs, which may be affected by a number

of factors beyond the Company's control. The marketability of minerals acquired or discovered by the Company may be affected by numerous factors which are beyond the control of the Company and which cannot be accurately predicted, such as market fluctuations, the proximity and capacity of milling facilities, mineral markets and processing equipment, and such other factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals, and environmental protection, the combination of which factors may result in the Company not receiving an adequate return of investment capital. The Company may be subject to risks which could not reasonably be predicted in advance. Events such as labour disputes, environmental issues, natural disasters or estimation errors are prime examples of industry related risks. The Company attempts to balance this risk through ongoing risk assessments conducted by its technical team.

Mineral Resource Estimates

The Company's reported mineral resources (the "**Mineral Resources**") are estimations only. No assurance can be given that the estimated Mineral Resources will be recovered. By their nature, Mineral Resource estimations are imprecise and depend, to a certain extent, upon statistical inferences, which may ultimately prove unreliable because, among other factors, they are based on limited sampling, and, consequently, are uncertain because the samples may not be representative. Mineral Resource estimations may require revision (either up or down). There are numerous uncertainties inherent in estimating Mineral Resources, including many factors beyond the Company's control. Such estimation is a subjective process, and the accuracy of any Mineral Resource estimate is a function of the quantity and quality of available data and of the assumptions made and judgments used in engineering and geological interpretation. There can be no assurance that recoveries in small-scale laboratory tests will be duplicated in larger scale tests under on-site conditions. In particular, factors that may affect Mineral Resource estimates include:

- changes in interpretations of mineralization geometry and continuity of mineralization zones;
- input parameters used to constrain the block cave underground mining shapes that constrain the Mineral Resources;
- metallurgical and mining recoveries;
- operating and capital cost assumptions;
- metal price and exchange rate assumptions;
- confidence in modifying factors, including assumptions that surface rights to allow infrastructure to be constructed will be forthcoming;
- delays or other issues in reaching agreements with local or regulatory authorities and stakeholders;
- changes in land tenure requirements or permitting requirements from those discussed in the report; and
- changes in the environmental regulations or laws governing the property. Changes in key assumptions and parameters could result in a restatement of Mineral Resource estimates.

Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability and there is no assurance that they will ever be mined or processed profitably. Due to the uncertainty which may attach to Mineral Resources, there is no assurance that all or any part of measured or indicated Mineral Resources will ever be converted into Mineral Reserves. Any material reductions in estimates of Mineral Resources could have a material adverse effect on the Company's results of operations and financial condition.

Geopolitical Risk

The Company may be affected in varying degrees by government regulations with respect to, but not limited to, restrictions on future exploitation and production, price controls, export controls, currency availability, income taxes, delays in obtaining or the inability to obtain necessary permits, opposition to mining from environmental and other non-governmental organizations, expropriation of property, ownership of assets, environmental legislation, labour relations, limitations on mineral exports, increased financing costs, and site safety. In addition, legislative enactments may be delayed or announced without being enacted and future political action that may adversely affect the Company cannot be predicted. Any changes in regulations or shifts in political attitudes that may result, among other things, in significant changes to mining laws or any other

national legal body of regulations or policies are beyond the control of the Company and may adversely affect its business.

Economic Instability in Argentina

The Company's investment is located in Argentina. There are risks relating to an uncertain or unpredictable economic environment in Argentina. In December 2019, the Argentinian government reinstated currency controls previously lifted, which, among other impacts, restricts the ability of companies and its citizens to obtain foreign currencies, in each case requiring Central Bank approval. The government has also reversed corporate tax rate reductions previously introduced by the previous opposition government.

Foreign Operations Risk

The Company's investee, MSA, conducts its exploration activities in Argentina. The Company's operations in Argentina expose the Company to risks that may not otherwise be experienced if all operations were located in Canada. The risks include, but are not limited to, illegal mining, changing political conditions, fluctuations in currency exchange rates, expropriation or nationalization without adequate compensation, changes to royalty and tax regimes, high rates of inflation, labour unrest and difficulty in understanding and complying with the regulatory and legal framework respecting ownership and maintenance of mineral properties, as well as the revocation or suspension of previously issued mining permits. Changes in mining or investment policies or shifts in political attitudes may also adversely affect the Company's existing assets and operations. Real and perceived political risk may also affect the Company's ability to finance exploration programs and attract joint venture or option partners, and future mine development opportunities. Numerous countries have introduced changes to mining regimes that reflect increased government control or participation in the mining sector, including, but not limited to, changes of law affecting foreign ownership, mandatory government participation, taxation and royalties, exploration licensing, export duties, and repatriation of income or return of capital. There can be no assurance that industries, which are deemed of national or strategic importance in countries in which the Company has assets, including mineral exploration, will not be nationalized. There is a risk that further government limitations, restrictions or requirements, not presently foreseen, will be implemented. Changes in policy that alter laws regulating the mining industry could have a material adverse effect on the Company. There can be no assurance that the Company's assets in these countries will not be subject to nationalization, requisition or confiscation, whether legitimate or not, by an authority or body.

In addition, in the event of a dispute arising from foreign operations, the Company may be subject to the exclusive jurisdiction of foreign courts or may not be successful in subjecting foreign persons to the jurisdiction of courts in Canada. The Company also may be hindered or prevented from enforcing its rights with respect to governmental instrumentality because of the doctrine of sovereign immunity. It is not possible for the Company to accurately predict such developments or changes in laws or policy or to what extent any such developments or changes may have a material adverse effect on the Company. Non-compliance with applicable laws, regulations and permitting requirements (including allegations of such) may result in enforcement actions, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed or causing the withdrawal of permits or mining licenses, and the imposition of corrective measures requiring material capital expenditure or remedial action resulting in materially increased cost of compliance, reputational damage and potentially impaired ability to secure future approvals and permits. The Company may be required to compensate third parties for loss or damage and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Liquidity Risk

Liquidity risk is the risk that the Company will be unable to meet the obligations associated with its working capital. The Company has sufficient funds to settle its short-term working capital requirements. The Company's ability to manage liquidity risk in the future will be dependent on, but not limited to, its ability to raise financing necessary to fund its exploration programs, defend its mineral properties concession rights, discharge its liabilities as they become due and generate positive cash flows from operations.

Sources of Funds and Share Price Fluctuation Risks

The only sources of funds presently available to the Company are the sale of equity/debt capital or through a Partner Agreement. There is no assurance that such sources will continue to be available, in the short term or at all. Failure to obtain additional financing on a timely basis could cause the Company to reduce or terminate its proposed operations and the loss of some or all of the value of an investment in the securities. Securities markets have at times in the past experienced a high degree of price and volume volatility, and the market price of securities of many companies, particularly those considered to be exploration stage companies such as the Company have experienced wide fluctuations in share prices which have not necessarily been related to their operating performance, underlying asset values or prospects. There can be no assurance that these kinds of share price fluctuations will not occur in the future, and if they do occur, how severe the impact may be on the Company's ability to raise additional funds through equity issues and the corresponding effect on the Company's financial position.

Internal Controls

Internal controls over financial reporting are procedures designed to provide reasonable assurance that transactions are properly authorized, assets are safeguarded against unauthorized or improper use, and transactions are properly recorded and reported. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance with respect to the reliability of financial reporting and financial statement preparation.

Tax

The Company runs its business in different countries and strives to run its business in as tax-efficient a manner as possible. The tax systems in certain of these countries are complicated and subject to changes. For this reason, future negative effects on the result of the Company due to changes in tax regulations cannot be excluded. Repatriation of earnings to Canada from other countries may be subject to withholding taxes. The Company has no control over withholding tax rates.

Operating Hazards Risks

Exploration for natural resources involves many risks, which even a combination of experience, knowledge and careful evaluation may not be able to overcome. Operations in which the Company has a direct or indirect interest will be subject to all the hazards and risks normally incidental to exploration, development and production of mineral resources, any of which could result in work stoppages, damage to persons or property and possible environmental damage. Unusual or unexpected formations, formation pressures, fires, power outages, labour disruptions, flooding, explosions, cave-ins, landslides, weather conditions and the inability to obtain suitable or adequate machinery, equipment or labour are other risks involved in extraction operations and the conduct of exploration programs. The Company's exploration activities will be subject to the availability of third-party contractors and equipment. There are also physical risks to the exploration personnel. The Company maintains insurance for amounts which it considers adequate, however, the nature of these risks is such that liabilities might exceed policy limits, the liabilities and hazards might not be insurable against, or the Company might not elect to insure itself against such liabilities due to high premium costs or other reasons, in which event the Company could incur significant costs that could have a material adverse effect upon its financial condition.

Pandemic Diseases

The Company's operations are subject to the risk of emerging infectious diseases or the threat of outbreaks of viruses or other contagions or epidemic diseases. These infectious disease risks may not be adequately responded to locally, nationally or internationally due to lack of preparedness to detect and respond to outbreaks or respond to significant pandemic threats. As such, there are potentially significant economic and social impacts of infectious disease risks, including the inability of the Company's exploration operations to operate as intended due to shortage of skilled employees, shortages in supply chains, inability of employees to access sufficient healthcare, significant social upheavals, government or regulatory actions or inactions, the declines in the price of precious metals, capital market volatility, or other unknown but potentially significant impacts.

Given the fact that the Company's properties are located in Argentina, there are potentially significant economic losses from infectious disease outbreaks that can extend far beyond the initial location of an infection disease outbreak. As such, both catastrophic outbreaks as well as regional and local outbreaks can have a significant impact on the Company's operations. The Company may not be able to accurately predict the quantum of such risks. In addition, the Company's own operations are exposed to the infectious disease risks noted above and as such the Company's operations may be adversely affected by such infectious disease risks. Accordingly, any outbreak or threat of an outbreak of a virus or other contagions or epidemic disease could have a material adverse effect on the Company, its business, results from operations and financial condition.

Current Global Financial Conditions

The economic viability of the Company's business plan is impacted by the Company's ability to obtain financing. The economic conditions and outlook of the jurisdictions in which the Company's projects reside, and more generally global economic conditions, may impact the general availability of financing through public and private debt and equity markets, as well as through other avenues. Significant political, market, economic, natural or manmade events may have wide-reaching effects and, to the extent they are not accurately anticipated or priced into markets, may result in sudden periods of market volatility and correction. Periods of market volatility and correction may have an adverse impact on economic growth and outlook, as well as lending and capital markets activity, all of which may impact the Company's ability to secure adequate financing on favorable terms, or at all. Most recently, global financial markets experienced a period of correction and increased volatility during the COVID-19 pandemic and the conflict between the Russian Federation and Ukraine, which began in March 2020 and February 2022, respectively, and are ongoing as of the date of this MD&A. As these global events evolve, there is no guarantee that credit market conditions will not worsen. A general risk adverse approach to investing, decreases in consumer spending and increases in the unemployment rate and consumer debt levels, which may become more predominant as a result of market turmoil, may limit the Company's ability to obtain future equity financing. Inability to obtain financing at all, or on acceptable terms, may have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Other events may also result in volatility and disruption to global supply chains, operations, mobility of people, patterns of consumption and service, and financial markets, and therefore potentially have a negative impact on the Company's ability to secure financing on favourable terms, or at all, its access to the project, or its ability to execute its business initiatives, including its field programs. Such events may include catastrophic events, either on a global scale or in the specific jurisdictions where the Company has its projects, and include, but are not limited to, financial crises, such as that which occurred globally in 2008, earthquakes, tsunamis, floods, typhoons, fires, power disruptions, other natural or manmade disasters, terrorist attacks, wars, riots, civil unrest or other conflicts, outbreaks of a public health crises, including epidemics, pandemics or outbreaks of new infectious diseases or viruses, as well as related and attendant events. Furthermore, general market, political and economic conditions, including, for example, inflation, interest and currency exchange rates, structural changes in the global mining industry, global supply and demand for commodities, political developments, legislative or regulatory changes, social or labour unrest and stock market trends will affect the Company's operating environment and its operating costs, profit margins and share price. Uncertainty or adverse changes relating to government regulation, economic and foreign policy matters, and other world events have the potential to adversely affect the performance of and outlook for the Canadian and global economies, which in turn may affect the ability of the Company to access financing on favourable terms or at all. The occurrence of negative sentiment or events in the Canadian and broader global economy could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Uninsurable Risks

Exploration, development and production operations on mineral properties involve numerous risks, including unexpected or unusual geological operating conditions, rock bursts, cave-ins, fires, floods, earthquakes and other environmental occurrences, as well as political and social instability. It is not always possible to obtain insurance against all such risks and the Company may decide not to insure against certain risks because of high premiums or other reasons. Should such liabilities arise, they could reduce or eliminate any further profitability

and result in increasing costs and a decline in the value of the securities of the Company. The Company does not maintain insurance against political risks.

Commodity Price Risk

Mineral prices fluctuate widely and are affected by numerous factors beyond the Company's control such as the sale or purchase of commodities by various central banks, financial institutions, expectations of inflation or deflation, currency exchange fluctuations, interest rates, global or regional consumptive patterns, international supply and demand, speculative activities and increased production due to new mine developments, improved mining and production methods and international economic and political trends. The Company's revenues, if any, are expected to be in large part derived from the extraction of mineral products. As such, the effect of these factors on the price in future product sales, and therefore the economic viability of any of the Company's exploration projects, cannot accurately be predicted. There can be no assurance that the price of any commodities will be such that any of the properties in which the Company has, or has the right to acquire, an interest may be mined at a profit. Further, the prices of metals and minerals and future expectations of such prices have a significant impact on the market sentiment for investment in mining and mineral exploration companies.

Currency Risk

Foreign currency risk is the risk that the fair value of future cash flows from the Company's operations will fluctuate due to changes in foreign exchange rates. The Company is exposed to foreign currency risk with respect to cash balances and transactions as a portion of these amounts are denominated in US dollars and, formerly, Argentine Pesos. The Company has not entered into any foreign currency contracts to mitigate this risk.

The Company's primary operations were located in Argentina until April 5, 2024. The Company raises funds in Canadian dollars and paid most of its Argentinean costs in United States Dollars or Argentinean Pesos, and was therefore subject to foreign exchange risk on this payment stream. As the proceeds from financings were often immediately converted to Argentinean Pesos, these cash reserves were subject to foreign exchange risk.

Environmental Risk

Exploration projects or operations are subject to the environmental laws and applicable regulations of the jurisdiction in which the Company operates. Environmental standards continue to evolve, and the current trend is moving toward a longer, more complete and rigid process. The Company reviews environmental matters on an ongoing basis. If appropriate, the Company will make appropriate provisions in its financial statements for any potential environmental liability. However, there is no assurance that existing or future environmental regulation will not materially adversely affect the Company's business, financial condition and results of operations. Environmental hazards may exist on the properties on which the Company holds interests which are unknown to the Company at present and which have been caused by previous or existing owners or operators of the properties. Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Parties engaged in mining operations, including the Company, may be required to compensate those suffering loss or damage by reason of the mining activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Community Relations and Public Opposition to Mining Activities

While the Company seeks to operate in a socially responsible manner and believes it has good relationships with local communities in the regions in which it operates, there is no guarantee that its efforts in this respect will mitigate this potential risk. Non-governmental Organizations or local community groups could direct adverse publicity against and/or disrupt the operations of the Company in respect of one or more of its properties, despite the Company's successful compliance with social and environmental best practices. Any such actions and the resulting media coverage could have adverse effects on the reputation and financial

condition of the Company or its relationships with the communities in which it operates, which could have a material adverse effect on the business, financial condition, results of operations, cash flows or prospects of the Company.

Permits and Licenses Risks

The operations of the Company will require licenses and permits from various governmental authorities. The Company believes it will be able to obtain in the future all necessary licenses and permits to carry on the activities which it intends to conduct and intends to comply in all material respects with the terms of such licenses and permits. There can be no guarantee, however, that the Company will be able to obtain and maintain, at all times, all licenses and permits required to undertake its proposed exploration or to place its properties into commercial production and to operate mining facilities if its exploration programs are successful. Amendments to current laws and regulations governing the operating and activities of the Company and the more stringent implementation thereof could have a substantial adverse impact on the business, financial condition and the results of operations of the Company. Obtaining necessary permits, leases and licenses can be a complex, time-consuming process and the Company cannot be certain that it will be able to obtain necessary permits on acceptable terms, in a timely manner or at all. The costs and delays associated with obtaining necessary permits, leases and licenses and complying with these permits and applicable laws and regulations could stop, delay or restrict the Company from proceeding with the development of an exploration project or the development and operation of a mine. Any failure to comply with applicable laws and regulations or permits could result in interruption or closure of exploration, development or mining operations, or fines, penalties or other liabilities. The Company could also lose its licenses or permits under the terms of its existing agreements.

Title Matters Risk

While the Company has followed and intends to follow standard industry accepted due diligence procedures with respect to title for any mineral claims in which it has or will acquire a material interest, there is no guarantee that title to such properties will not be challenged or impugned. There is no guarantee of title to any of the Company's properties. The Company's properties may be subject to prior unregistered agreements or transfers and may also be affected by undetected defects or the rights of indigenous peoples. Surveys have not been carried out on the Company's mineral properties, and their boundaries and areas could be in doubt. The rules governing mining concessions in Argentina are complex and any failure by the Company to meet requirements would have a material adverse effect on the Company. Any defects in the title to the Company's properties could have a material and adverse effect on the Company. No assurance can be given that applicable governments will not revoke or significantly alter the conditions of the applicable exploration and mining authorizations nor that such exploration and mining authorizations will not be challenged or impugned by third parties. Although the Company has not had any problem renewing its licenses in the past there is no guarantee that it will always be able to do so. Inability to renew a license could result in the loss of any project located within that license.

Option, Joint Venture and Earn In Agreements

The Company has and may continue to enter into option agreements, joint ventures, and/or earn in agreements (collectively "Partner Agreements") as a means of gaining property interests and raising funds. Any failure of any partner to meet its obligations to the Company or other third parties, or any disputes with respect to third parties' respective rights and obligations, could have a negative impact on the Company. The Company may be unable to exert direct influence over strategic decisions made in respect of properties that are subject to the terms of these agreements, and the result may be a materially adverse impact on the strategic value of the underlying properties. Under the terms of such Partner Agreements, in the event a partner decided to cease funding and terminate the Partner Agreement, the Company's business, financial results, and condition may be subject to the material adverse effects.

Competition and Marketability Risks

The resource industry is intensely competitive in all its phases, and the Company competes with many companies possessing greater financial resources and technical facilities than itself. Competition could adversely affect the Company's ability to acquire suitable properties for exploration in the future.

Management Risk

The success of the Company's future business is largely dependent on a relatively small number of key members of management. The loss of any key member could be detrimental if a suitable replacement could not be found at a comparable compensation level.

No Assurance of Profitability

The Company has no history of earnings and due to the nature of its business there can be no assurance that the Company will ever be profitable. The Company has not paid dividends on its shares since incorporation and does not anticipate doing so in the foreseeable future. The only present source of funds available to the Company is from the sale of its common shares or from the sale or optioning of a portion of its interest in its resource properties. Even if the results of exploration are encouraging, the Company may not have sufficient funds to conduct the further exploration that may be necessary to determine whether a commercial deposit exists. While the Company may generate additional working capital through further equity offerings or through the sale or syndication of its properties, there can be no assurance that any such funds will be available on favorable terms, or at all. At present, it is impossible to determine what amounts of additional funds, if any, may be required. Failure to raise such additional capital could put the continued viability of the Company at risk.

Possible Dilution to Present and Prospective Shareholders

The Company's plan of operation, in part, contemplates the financing of its business by the issuance of securities and possibly incurring debt. Any transaction involving the issuance of previously authorized but unissued common shares, or securities convertible into common shares, would result in dilution, possibly substantial, to present and prospective shareholders. The Company has sought a joint venture partner to fund the exploration of the Rosita Project. Offering an interest in its Rosita Project to a partner would dilute the Company's interest in the project.

Risk of Legal Proceedings in the Ordinary Course of Business

Due to the nature of its business, the Company may be subject to regulatory investigations, claims, lawsuits and other proceedings in the ordinary course of its business. The Company's operations are subject to the risk of legal claims by employees, unions, contractors, lenders, suppliers, joint venture partners, shareholders, governmental agencies or others through private actions, class actions, administrative proceedings, regulatory actions or other litigation. Plaintiffs may seek recovery of very large or indeterminate amounts, and the magnitude of the potential loss relating to such lawsuits may remain unknown for substantial periods of time. Defense and settlement costs can be substantial, even with respect to claims that have no merit. The results of these legal proceedings cannot be predicted with certainty due to the uncertainty inherent in litigation, including the effects of discovery of new evidence or advancement of new legal theories, the difficulty of predicting decisions of judges and juries and the possibility that decisions may be reversed on appeal. The litigation process could, as a result, take away from the time and effort of the Company's management and could force the Company to pay substantial legal fees or penalties. There can be no assurances that the resolutions of any such matters will not have a material adverse effect on the Company's business, financial condition and results of operations.

Capital Risk Management

The Company defines capital as total equity. The Company manages its capital to ensure that funds are available or are scheduled to be raised to provide adequate funds to carry out the Company's defined exploration programs, meet its ongoing administrative costs, property maintenance and option payments. This is achieved

by the Board's review and acceptance of exploration budgets that are achievable using existing resources and the matching and timely release of the next stage of expenditures with the resources made available from private placements or other fundraising. There can be no assurance that the Company will be able to continue using equity capital in this manner.

Credit Risk Management

Credit risk is the risk that one party to a financial instrument will fail to meet its obligations and cause a financial loss. The Company's main credit risk arises from its cash deposits with banks. The Company limits its counterparty risk on its deposits by dealing only with financial institutions with high credit ratings. The Company is also exposed to credit risk on its financial assets.

Compliance with Anti-Corruption Laws

The Company is subject to various anti-corruption laws and regulations such as the Canadian Corruption of Foreign Public Officials Act. In general, these laws prohibit a company and its employees and intermediaries from bribing or making other prohibited payments to foreign officials or other persons to obtain or retain business or gain some other business advantage. In recent years, there has been a general increase in both the frequency of enforcement and the severity of penalties under such laws, resulting in greater scrutiny and punishment to companies convicted of violating anti-corruption and anti-bribery laws. Furthermore, a company may be found liable for violations by not only its employees, but also by its contractors and third-party agents. The Company's investment is located in Argentina, which is perceived as having fairly high levels of corruption relative to Canada. The Company cannot predict the nature, scope or effect of future anti-corruption regulatory requirements to which the Company's operations might be subject or the manner in which existing laws might be administered or interpreted. Failure to comply with the applicable legislation and other similar foreign laws could expose the Company and/or its senior management to civil and/or criminal penalties, other sanctions and remedial measures, legal expenses and reputational damage, all of which could materially and adversely affect the Company's business, financial condition and results of operations. Likewise, any investigation of any alleged violations of the applicable anti-corruption legislation by Canadian or foreign authorities could also have an adverse impact on the Company's business, financial condition and results of operations.

HYPERINFLATION

During the year ended December 31, 2025, the annual rate of inflation for Argentina, as reported by the Banco Central de la Republica Argentina, was 31.55% (2024 – 117.8%). Therefore, Argentina remains a hyper-inflationary economy. The functional currency of MSA is the Argentine Peso. The Company has prepared these Condensed Interim Consolidated financial statements on the historical cost approach within IAS 29.

IAS 29, Financial Reporting in Hyper-Inflationary Economies, ("IFRS 29") applies to the financial statements of an entity whose functional currency is the currency of a hyperinflationary economy. The designation of an economy as hyperinflationary involves the assessment of several factors and requires the Company to make certain estimates and judgments, such as the assessment of historic inflation rates and anticipation of future trends. Changes in such estimates may significantly impact the carrying value of the Company's non-monetary assets or liabilities, and results of operations that are subject to hyperinflationary adjustments, and the related gains and losses with the Condensed Interim Consolidated statements of income (loss) and comprehensive income (loss).

To measure the impact of inflation on MSA's financial position and results, MSA has elected to use the Wholesale Price Index (Indice de Precios Mayoristas or "IPIM") for periods up to December 31, 2016, and the Retail Price Index (Indice de Precios al Consumidor or "IPC") thereafter. These price indices have been recommended by the Government Board of the Argentine Federation of Professional Councils of Economic Sciences ("FACPCE").

As a result of the change in the IPC during the period ended March 31, 2024, the Company recognized a net expense of $489,840, to adjust transactions recorded during the year into a measuring unit current as of December 31, 2024. The level of the IPC at June 30, 2026 was 11,826.41 (December 31, 2025 – 10,121.37),

which represents an increase of 16.85% over the IPC at December 31, 2025. While the Company no longer includes the related gain or loss as a separate line item on the consolidated statements of loss and comprehensive loss following the loss of control of MSA, the effects of the change in the IPC are reflected in the share of income or loss of MSA recognized each financial reporting period.

The application of hyperinflation accounting required restatement of the Argentine subsidiary's nonmonetary assets and liabilities, shareholders' equity, and comprehensive loss items from the transaction date when they were first recognized into the current purchasing power which reflects a price index current at the end of the reporting period before being included in the Financial Statements. The resulting financial information is more meaningful, relevant and representative of a measuring unit current as of the reporting date. To measure the impact of inflation on its financial position and results, the Company has elected to use price indices that have been recommended by the Government Board of the Argentine Federation of Professional Councils of Economic Sciences ("FACPCE").

QUALIFIED PERSONS

The scientific and technical information in this MD&A has been compiled, reviewed and approved by Dr. Renato Bobis, MAusIMM CP (Geo), part-time VP-Exploration of the Company, and is a qualified person as defined by Canadian National Instrument 43-101. Dr Bobis has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Qualified Person.

DISCLOSURE CONTROLS AND INTERNAL CONTROLS OVER FINANCIAL REPORTING

Disclosure controls and procedures are designed to provide reasonable assurance that information required to be disclosed by the Company in its annual filings, interim filings or other reports filed or submitted by it under securities legislation is recorded, processed, summarized and reported within the time periods specified in the securities legislation and include controls and procedures designed to ensure that information required to be disclosed by the Company in its annual filings, interim filings or other reports filed or submitted under securities legislation is accumulated and communicated to the Company's management, including its CEO and CFO, as appropriate, to allow timely decisions regarding required disclosure. The Company's internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and preparation of financial statements for external purposes in accordance with International Financial Reporting Standards. However, due to inherent limitations, internal control over financial reporting may not prevent or detect all misstatements or fraud. There have not been any changes in the Company's disclosure controls and procedures and the internal control over financial reporting that occurred during the six months ended June 30, 2026 that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

Limitations of controls and procedures:

The Company's management believes that any disclosure controls and procedures or internal control over financial reporting, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, they cannot provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been prevented or detected. These inherent limitations include the realities that judgments in decision making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by unauthorized override of the control. The design of any control system also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Accordingly, because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

ADDITIONAL INFORMATION

Additional information relating to the Company is available under the Company's profile on SEDAR+ at www.sedarplus.ca
